The Broad Institute of MIT and Harvard (http://
www.broadinstitute.org) seeks to transform medicine by empowering
creative and energetic scientists of all disciplines from across the
MIT, Harvard, and the Harvard-affiliated hospital communities
to work together to address even the most difficult challenges in
biomedical research.

Faculty members at the Broad Institute are faculty members at MIT,
Harvard, or one of the Harvard-affiliated hospitals and have teaching
and other responsibilities at their home institution. Currently there
are 15 core faculty members whose primary laboratory is located at
the Broad, and over 300 associate members whose primary lab is
located at one of the affiliated universities or hospitals.

The Broad Institute is also home to many postdoctoral and graduate
students who perform some or all of their research at the Broad
Institute, although graduate students earn their degrees from their
respective home institutions. In addition, the Broad Institute offers
numerous research opportunities for undergraduate and high school
students. To learn more about these programs, visit the Broad
website.

The Broad Institute primary research labs are at 415 Main Street
(across the street from MIT’s Biology Department and adjacent to the
Whitehead Institute), at 320 Charles Street, and at 75 Ames Street.

Further information may be obtained by contacting the Broad
Institute Communications Office at 617-714-7000.
