Hands-on analysis of data demonstrates the interplay between statistics and computation. Includes four modules, each centered on a specific data set, and introduced by a domain expert. Provides instruction in specific, relevant analysis methods and corresponding algorithmic aspects. Potential modules may include medical data, gene regulation, social networks, finance data (time series), traffic, transportation, weather forecasting, policy, or industrial web applications. Projects address a large-scale data analysis question. Students taking graduate version complete additional assignments. Enrollment limited; priority to Statistics and Data Science minors, and to juniors and seniors.

Reviews and analyzes federal and state regulation of air and water pollution, hazardous waste, green-house gas emissions, and the production and use of toxic chemicals. Analyzes pollution as an economic problem and the failure of markets. Explores the role of science and economics in legal decisions. Emphasizes use of legal mechanisms and alternative approaches (such as economic incentives and voluntary approaches) to control pollution and encourage chemical accident and pollution prevention. Focuses on the major federal legislation, the underlying administrative system, and the common law in analyzing environmental policy, economic consequences, and the role of the courts. Discusses classical pollutants and toxic industrial chemicals, green-house gas emissions, community right-to-know, and environmental justice. Develops basic legal skills: how to read/understand cases, regulations, and statutes. Students taking graduate version are expected to explore the subject in greater depth.

**IDS.330 Real Options for Product and Systems Design**  
Prereq: IDS.333 or permission of instructor  
G (Spring; second half of term)  
3-0-3 units  
Focuses on implementation of flexibility (real options) in the design of products and systems. Applies the methods presented in IDS.333: recognition of uncertainty, identification of best opportunities for flexibility, and valuation of these options and their effective implementation. Students’ work culminates in a dynamic business plan for design and deployment of products, start-ups, ongoing management of operations, or policy plans. Students bring their own project concept, which they will analyze during the class. Useful complement to thesis or research projects.

IDS.449 Technology Policy Internship and Professional
Perspectives Seminar
Prereq: IDS.411 or permission of instructor
G (Fall, Spring)
1-1-1 units
Can be repeated for credit.
Seminar examines what technology policy is in practice. Considers
the question of “Who achieves what, when, how, and why?”
regarding technology and policy. Students who completed summer
internships present and dissect their experiences with special
reference to specific cases in which they participated. Develops
perspectives on practice in the field through sessions with alumni,
other practitioners, and development professionals within MIT.

Reviews the contributions of energy systems to global greenhouse
gas emissions, and the levers for reducing those emissions. Lectures
and projects focus on evaluating energy systems against
climate policy goals, using performance metrics such as
cost, carbon intensity, and others. Student projects explore
pathways for realizing emissions reduction scenarios. Projects
address the climate change mitigation potential of energy
technologies, technological and behavioral change trajectories,
and technology and policy portfolios.

**IDS.522 Mapping and Evaluating New Energy Technologies**
Prereq: Permission of instructor
G (Spring)
3-0-9 units

Project-based seminar covers recent developments in energy conversion and storage technologies. Merits of alternative technologies are debated based on their environmental performance and cost, and their potential improvement and scalability. Project teams develop quantitative models and interactive visualization tools to inform the future development of these technologies. Models may probe how the impact of a technology depends on assumptions about future advancements in materials or device design. Other projects may develop models for rational design choices (the selection of a particular material or processing technique) based on economic and environmental performance and physical constraints.
