DEPARTMENT OF CHEMISTRY

Chemistry is the study of the world of atoms, molecules, and solids. Chemists are both students and architects of this miniature universe, exploring the changes that occur, discovering the principles that govern these chemical changes, and devising ways to create entirely new classes of compounds and materials. Previous triumphs of chemistry include the synthesis of pharmaceuticals and agricultural products, while current challenges include chemical memory, solar cells, superconductors, clean fuels, batteries, and the solution of numerous important problems relating to health and the environment.

The Department of Chemistry (http://chemistry.mit.edu) offers the Bachelor of Science and Doctor of Philosophy degrees. The department’s program of teaching and research spans the breadth of chemistry. General areas covered include biological chemistry, inorganic chemistry, organic chemistry, and physical chemistry. Some of the activities of the department, especially those that involve “translational research” (the application of basic science to practical problems) are carried out in association with interdisciplinary laboratories and centers. See the section on Research and Study (http://catalog.mit.edu/mit/research) for more information.

The Bachelor of Science (p. 3) degree provides rigorous education in the fundamental areas of chemical and biochemical knowledge and experimentation. Undergraduate students are encouraged to participate in the Undergraduate Research Opportunities Program (UROP) (http://catalog.mit.edu/mit/undergraduate-education/academic-research-options/undergraduate-research-opportunities-program) and to take graduate-level chemistry classes as well as subjects in other departments at the Institute, Harvard University, or Wellesley College.

The Doctor of Philosophy (p. 4) degree trains students to be world leaders in scientific research and education. In addition to formal coursework, each student undertakes a research problem that forms the core of graduate work. Graduate- and postgraduate-level research is often carried out in collaboration with scientists in other facilities and interdisciplinary laboratories.

Undergraduate Study

Bachelor of Science in Chemistry (Course 5)

Standard Chemistry Option

The Department of Chemistry offers an undergraduate program (http://catalog.mit.edu/degree-charts/chemistry-course-5) sufficiently broad as to provide excellent preparation for careers in many different areas of chemistry. Course 5 is designed to provide an education based on science, both for those who intend to go on to graduate study and those who intend to pursue a professional career immediately in either chemistry or an allied field, such as medicine, in which a sound knowledge of chemistry is important. Students receive thorough instruction in the principles of chemistry, supplemented by a strong foundation in mathematics, physics, biology, and the humanities. A Certification in Biochemistry by the American Chemical Society can be received with a bachelor’s degree for students who have concentrated in this area. The Department of Chemistry also teaches courses jointly with the departments of Biology, Chemical Engineering, Biological Engineering, and Materials Science and Engineering. Students at all levels are encouraged to undertake original research under the supervision of a member of the chemistry faculty.

Flexible Chemistry Option

undergraduatetext:

The Flexible Chemistry Option (http://catalog.mit.edu/degree-charts/chemistry-course-5/#flexibleoptiontext), “ChemFlex,” is designed to provide an education both for those who intend to pursue chemistry as a career and for those who plan to go into an allied field, such as biotechnology or scientific consulting, in which a sound knowledge of chemistry is important. Students receive thorough instruction in the principles of chemistry, supplemented by a strong foundation in mathematics, physics, biology, and the humanities. This training can be tailored to the student’s interests by the judicious choice of elective focus subjects that contribute to the major. The Department of Chemistry also teaches courses jointly with the departments of Biology, Chemical Engineering, Biological Engineering, and Materials Science and Engineering. The student’s faculty advisor can offer suggestions for elective subjects that are of value in preparation for specialization in the various broad areas of chemistry. The proper choice of electives is particularly important for students planning to continue their education in a graduate program. Students at all levels are encouraged to undertake original research.

Bachelor of Science in Chemistry and Biology (Course 5-7)

The Departments of Biology and Chemistry jointly offer a Bachelor of Science in Chemistry and Biology (http://catalog.mit.edu/degree-charts/chemistry-biology-course-5-7). A detailed description of the requirements for this degree program can be found in the section on Interdisciplinary Programs (http://catalog.mit.edu/interdisciplinary/undergraduate-programs/degrees/chemistry-biology).

Minor in Chemistry

The requirements for a Minor in Chemistry are as follows:

<table>
<thead>
<tr>
<th>Requirements</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>5.03 Principles of Inorganic Chemistry I</td>
<td>12</td>
</tr>
<tr>
<td>5.12 Organic Chemistry I</td>
<td>12</td>
</tr>
<tr>
<td>5.310 Laboratory Chemistry 1</td>
<td>12</td>
</tr>
<tr>
<td>5.60 Thermodynamics and Kinetics</td>
<td>12</td>
</tr>
</tbody>
</table>
Graduate Study

The Department of Chemistry offers the Doctor of Philosophy degree. The subjects offered aim to develop a sound knowledge of fundamentals and a familiarity with current progress in the most active and important areas of chemistry. In addition to studying formal subjects, each student undertakes a research problem that forms the core of graduate work. Through the experience of conducting an investigation leading to the doctoral thesis, a student learns general methods of approach and acquires training in some of the specialized techniques of research.

The areas of research (http://chemistry.mit.edu/research/overview) in the department include biological, environmental, inorganic, materials, organic and physical chemistry, broadly defined.

Chemical research frequently involves more than one of the traditional subfields. Some research activities of the department are carried out in association with interdisciplinary laboratories and centers as described in Research and Study (http://catalog.mit.edu/mit/research). These interdisciplinary research laboratories provide stimulating interaction among the research programs of several MIT departments and give students opportunities to become familiar with research work in disciplines other than chemistry. The department also participates in the interdisciplinary graduate Program in Polymers and Soft Matter, the Biotechnology Training Program, the Microbiology Program, and the Biophysics Certificate Program.

Admission Requirements for Graduate Study

Students intending to do graduate work in the Chemistry Department should have excellent undergraduate preparation in chemistry. The department is flexible with respect to specific course preparation; the essential requirement is demonstration of ability to progress with advanced study and research in some area of special interest. However, mathematics and physics are important prerequisites for graduate work in physical chemistry or chemical physics, whereas less preparation in these areas is required for work in organic chemistry.

Applicants to the Chemistry Department are required to submit scores from the verbal and quantitative sections of the Graduate Record Examination. Scores on the advanced examinations are optional.

Doctor of Philosophy

The Chemistry Department does not have any formal subject requirements for the doctoral degree. Each student, with the advice of a research supervisor, pursues an individual program of study that is pertinent to the student’s long-range research interests. All students are required to serve as a teaching assistant for two terms, usually during the first year.

During the first term of residence, all graduate students are encouraged to select research supervisors who serve as their advisors for the balance of their graduate careers. In particular, the overall program of graduate subjects is established by each student in consultation with the research supervisor. In planning this program and in establishing the thesis problem, careful consideration is given to the candidate’s academic record and professional experience, as well as to long-range objectives.

Written qualifying examinations are cumulative. Separate examinations in biological, inorganic, organic, and physical chemistry are offered each month from October through May. The examinations demonstrate an understanding of the important principles of each field. Six cumulative examinations must be passed to complete the written major examination. No fixed time limit is set for completion of this requirement; however, progress is reviewed periodically and the department expects a demonstrated passing performance in cumulative exams before a student takes

Inquiries

Additional information may be obtained from the Chemistry Education Office, Room 6-205, 617-253-7271.

Minor in Atmospheric Chemistry

The Minor in Atmospheric Chemistry (http://catalog.mit.edu/interdisciplinary/undergraduate-programs/minors/atmospheric-chemistry), offered jointly with the Departments of Earth, Atmospheric, and Planetary Sciences and Civil and Environmental Engineering, blends fundamental science with engineering and policy. For a description of the minor, see Interdisciplinary Programs.

The combination of 5.351 Fundamentals of Spectroscopy, 5.352 Synthesis of Coordination Compounds and Kinetics, and 5.353 Macromolecular Prodrugs is an acceptable alternative.

Total Units: 72

Applicants to the Chemistry Department are required to submit scores from the verbal and quantitative sections of the Graduate Record Examination. Scores on the advanced examinations are optional.
their second-year oral exam. It is normal to have passed at least four cumulative exams by that time. No other written general examinations are required. In particular, no entrance examinations are given.

A comprehensive oral examination in the candidate’s major field of advanced study is held generally in the fourth term of residence. Progress in the student’s research is also examined at that time. A final oral presentation on the subject of the doctoral research is scheduled after the thesis has been submitted and evaluated by a committee of examiners.

**Interdisciplinary Programs**

**Polymers and Soft Matter**
The Program in Polymers and Soft Matter (PPSM) offers students from participating departments an interdisciplinary core curriculum in polymer science and engineering, exposure to the broader polymer community through seminars, contact with visitors from industry and academia, and interdepartmental collaboration while working towards a PhD or ScD degree.

Research opportunities include functional polymers, controlled drug delivery, nanostructured polymers, polymers at interfaces, biomaterials, molecular modeling, polymer synthesis, biomimetic materials, polymer mechanics and rheology, self-assembly, and polymers in energy. The program is described in more detail under Interdisciplinary Graduate Programs.

**Financial Support**
The department usually appoints first-year graduate students as teaching assistants (TAs). TAs are assigned either to laboratory subjects or to discussion sections of lecture subjects. Most students receive appointments to research assistantships after their first year, and departmental fellowships are also available. Financial support after the first academic year is subject to the availability of funds and provided for students who maintain a satisfactory record.

**Inquiries**
Correspondence about the graduate program or appointments should be addressed to the Chemistry Education Office, Room 6-205, 617-253-1851.

5.00[J] Energy Technology and Policy: From Principles to Practice
Same subject as 6.929[J], 10.579[J], 22.813[J]
Prereq: None
G (Spring)
Not offered regularly; consult department
3-0-6 units
Develops analytical skills to lead a successful technology implementation with an integrated approach that combines technical, economical and social perspectives. Considers corporate and government viewpoints as well as international aspects, such as nuclear weapons proliferation and global climate issues. Discusses technologies such as oil and gas, nuclear, solar, and energy efficiency. Limited to 100.
J. Deutch

5.03 Principles of Inorganic Chemistry I
Prereq: 5.12
U (Spring)
5-0-7 units
Presents principles of chemical bonding and molecular structure, and their application to the chemistry of representative elements of the periodic system.
A. Radosevich

5.04 Principles of Inorganic Chemistry II
Prereq: 5.03
U (Fall)
4-0-8 units
Systematic presentation of the chemical applications of group theory. Emphasis on the formal development of the subject and its applications to the physical methods of inorganic chemical compounds. Against the backdrop of electronic structure, the electronic, vibrational, and magnetic properties of transition metal complexes are presented and their investigation by the appropriate spectroscopy described.
A. Radosevich, Y. Surendranath
5.05 Principles of Inorganic Chemistry III
Prereq: 5.03; Coreq: 5.04
G (Fall)
2-0-4 units
Principles of main group (s and p block) element chemistry with an emphasis on synthesis, structure, bonding, and reaction mechanisms.
C. C. Cummins

5.061 Principles of Organometallic Chemistry
Prereq: 5.03
G (Spring)
2-0-4 units
A comprehensive treatment of organometallic compounds of the transition metals with emphasis on structure, bonding, synthesis, and mechanism.
C. Cummins

5.062 Principles of Bioinorganic Chemistry
Prereq: 5.03
G (Fall; first half of term)
2-0-4 units
Delineates principles that form the basis for understanding how metal ions function in biology. Examples chosen from recent literature on a range of topics, including the global biogeochemical cycles of the elements; choice, uptake and assembly of metal-containing units; structure, function and biosynthesis of complex metallocofactors; electron-transfer and redox chemistry; atom and group transfer chemistry; protein tuning of metal properties; metalloprotein engineering and design; and applications to diagnosis and treatment of disease.
D. Suess

5.063 Organometallic Compounds in Catalytic Reactions
Prereq: 5.061
Acad Year 2018-2019: G (Spring; first half of term)
Acad Year 2019-2020: Not offered
2-0-4 units
An exploration of organometallic chemistry from the perspective of catalytic reactions in organic and polymer chemistry.
C. Cummins

5.067 Crystal Structure Refinement
Prereq: 5.068, 5.069, or permission of instructor
G (Fall)
2-3-1 units
Practical aspects of crystal structure determination from data collection strategies to data reduction and basic and advanced refinement problems of organic and inorganic molecules.
P. Mueller

5.068 Physical Inorganic Chemistry
Prereq: 5.03 and 5.04
G (Spring; second half of term)
3-0-3 units
Discusses the physical methods used to probe the electronic and geometric structures of inorganic compounds, with additional techniques employed in the characterization of inorganic solids and surfaces. Includes vibrational spectroscopy, solid state and solution magnetochemical methods, Mössbauer spectroscopy, electron paramagnetic resonance spectroscopy, electrochemical methods, and a brief survey of surface techniques. Applications to current research problems in inorganic and solid-state chemistry.
M. Dinca

5.069 Crystal Structure Analysis
Prereq: 5.03 and 5.04
G (Spring; first half of term)
2-0-4 units
Introduction to X-ray crystallography: symmetry in real and reciprocal space, space and Laue groups, geometry of diffraction, structure factors, phase problem, direct and Patterson methods, electron density maps, structure refinement, crystal growth, powder methods, limits of diffraction methods, structure data bases.
P. Mueller

5.07[J] Biological Chemistry I
Same subject as 20.507[J]
Prereq: 5.12
U (Fall)
5-0-7 units. REST
Credit cannot also be received for 7.05
Chemical and physical properties of the cell and its building blocks. Structures of proteins and principles of catalysis. The chemistry of organic/inorganic cofactors required for chemical transformations within the cell. Basic principles of metabolism and regulation in pathways, including glycolysis, gluconeogenesis, fatty acid synthesis/degradation, pentose phosphate pathway, Krebs cycle and oxidative phosphorylation, DNA replication, and transcription and translation.
E. Nolan
5.08[J] Biological Chemistry II  
Same subject as 7.08[J]  
Subject meets with 7.80  
Prereq: 5.12 and (5.07[J] or 7.05)  
U (Spring)  
4.0-8 units  
More advanced treatment of biochemical mechanisms that underlie biological processes. Topics include macromolecular machines such as the ribosome, the proteosome, fatty acid synthases as a paradigm for polyketide synthases and non-ribosomal polypeptide synthases, and polymerases. Emphasis is on experimental methods used to unravel these processes and how these processes fit into the cellular context and coordinate regulation.  
E. Nolan, R. Raines

5.111 Principles of Chemical Science  
Prereq: None  
U (Fall, Spring)  
5-0-7 units. CHEMISTRY  
Credit cannot also be received for 3.091, 5.112, CC.5111, ES.5111, ES.5112  
Introduction to chemistry, with emphasis on basic principles of atomic and molecular electronic structure, thermodynamics, acid-base and redox equilibria, chemical kinetics, and catalysis. Introduction to the chemistry of biological, inorganic, and organic molecules.  
K. Nelson, M. Shoulders M. Bawendi, B. Pentelute

5.112 Principles of Chemical Science  
Prereq: None  
U (Fall)  
5-0-7 units. CHEMISTRY  
Credit cannot also be received for 3.091, 5.112, CC.5111, ES.5111, ES.5112  
Introduction to chemistry for students with an unusually strong background in chemistry. Knowledge of calculus equivalent to 18.01 is recommended. Emphasis on basic principles of atomic and molecular electronic structure, thermodynamics, acid-base and redox equilibria, chemical kinetics, and catalysis. Applications of basic principles to problems in metal coordination chemistry, organic chemistry, and biological chemistry.  
S. Ceyer, M. Dinca

5.12 Organic Chemistry I  
Prereq: Chemistry (GIR)  
U (Fall, Spring)  
5-0-7 units. REST  
Credit cannot also be received for CC.512  
Introduction to organic chemistry. Development of basic principles to understand the structure and reactivity of organic molecules. Emphasis on substitution and elimination reactions and chemistry of the carbonyl group. Introduction to the chemistry of aromatic compounds.  
J. Johnson, C. Rotsides, R. Danheiser, C. Rotsides

5.13 Organic Chemistry II  
Prereq: 5.12  
U (Fall)  
5-0-7 units  
Focuses on synthesis, structure determination, mechanism, and the relationships between structure and reactivity. Selected topics illustrate the role of organic chemistry in biological systems and in the chemical industry.  
M. Movassaghi

5.24[J] Archaeological Science  
Same subject as 3.985[J], 12.011[J]  
Prereq: Chemistry (GIR) or Physics I (GIR)  
U (Spring)  
3-1-5 units. HASS-S  
See description under subject 3.985[J].  
H. N. Lechtman

5.301 Chemistry Laboratory Techniques  
Prereq: Chemistry (GIR) and permission of instructor  
U (IAP)  
1-4-1 units  
Practical training in basic chemistry laboratory techniques. Intended to provide first-year students with the skills necessary to undertake original research projects in chemistry. First-year students only. Enrollment limited.  
J. Dolhun
5.310 Laboratory Chemistry
Prereq: None. Coreq: 5.12
U (Fall, Spring)
2-8-2 units. Institute LAB
Introduces experimental chemistry for students who are not majoring in Course 5. Principles and applications of chemical laboratory techniques, including preparation and analysis of chemical materials, measurement of pH, gas and liquid chromatography, visible-ultraviolet spectrophotometry, infrared spectroscopy, kinetics, data analysis, and elementary synthesis. Enrollment limited.

J. Dolhun

5.351 Fundamentals of Spectroscopy
Prereq: Chemistry (GIR)
U (Fall, Spring; partial term)
1-2-1 units. Partial Lab
Students carry out an experiment that introduces fundamental principles of the most common types of spectroscopy, including UV-visible absorption and fluorescence, infrared, and nuclear magnetic resonance. Emphasizes principles of how light interacts with matter, a fundamental and hands-on understanding of how spectrometers work, and what can be learned through spectroscopy about prototype molecules and materials. Students record and analyze spectra of small organic molecules, native and denatured proteins, semiconductor quantum dots, and laser crystals. Satisfies 4 units of Institute Laboratory credit.

K. Nelson

5.352 Synthesis of Coordination Compounds and Kinetics
Prereq: None. Coreq: 5.351
U (Fall, Spring; partial term)
1-2-2 units. Partial Lab
Students carry out an experiment that provides an introduction to the synthesis of simple coordination compounds and chemical kinetics. Illustrates cobalt coordination chemistry and its transformations as detected by visible spectroscopy. Students observe isosbestic points in visible spectra, determine the rate and rate law, measure the rate constant at several temperatures, and derive the activation energy for the aquation reaction. Satisfies 5 units of Institute Laboratory credit.

Y. Surendranath

5.353 Macromolecular Prodrugs
Prereq: None. Coreq: 5.12 and 5.352
U (Fall, Spring; partial term)
1-2-1 units. Partial Lab
Students carry out an experiment that builds skills in how to rationally design macromolecules for drug delivery based on fundamental principles of physical organic chemistry. Begins with conjugation of a drug molecule to a polymerizable group through a cleavable linker to generate a prodrug monomer. Continues with polymerization of monomer to produce macromolecular (i.e., polymer) prodrug; monomer and polymer prodrugs are fully characterized. Rate of drug release is measured and correlated to the size of the macromolecule as well as the structure of the cleavable linker. Satisfies 4 units of Institute Laboratory credit.

J. Johnson, C. Rotsides

5.361 Expression and Purification of Enzyme Mutants
Prereq: (5.07[J] or 7.05) and (5.310 or 5.352)
U (Spring; partial term)
1-2-1 units
Students use biochemical techniques for protein expression and DNA manipulation of Bcr-Abl kinase, which is inhibited by the blockbuster drug Gleevec in the treatment of chronic myelogenous leukemia. Uses various standard bioanalytical and biochemical methods in lab to characterize and produce this protein.

B. Pentelute

5.362 Kinetics of Enzyme Inhibition
Prereq: (5.07[J] or 7.05) and (5.310 or 5.352); Coreq: 5.361
U (Spring; partial term)
1-2-2 units
Students study the activity and structure of the domains developed in 5.361 to understand the role of mutations in the development of resistance to Gleevec. Students assay both mutant and wild-type Abl kinase domains for phosphorylation activity to determine enzyme kinetics and the inhibition efficacy of Gleevec. They conduct additional testing on kinase activity of Gleevec-resistant mutants in the presence of other potential inhibitors. Uses structure-viewing programs to enable analysis of the mechanistic basis of Bcr-Abl inhibition and Gleevec-resistance.

B. Pentelute
5.363 Organic Structure Determination
Prereq: 5.12; Coreq: 5.13
U (Fall; partial term)
1-2-1 units. Partial Lab
Introduces modern methods for the elucidation of the structure of organic compounds. Students carry out transition metal-catalyzed coupling reactions, based on chemistry developed in the Buchwald laboratory, using reactants of unknown structure. Students also perform full spectroscopic characterization - by proton and carbon NMR, IR, and mass spectrometry of the reactants - and carry out coupling products in order to identify the structures of each compound. Other techniques include transfer and manipulation of organic and organometallic reagents and compounds, separation by extraction, and purification by column chromatography. Satisfies 4 units of Institute Laboratory credit.
S. Buchwald, C. Rotsides

5.371 Continuous Flow Chemistry: Sustainable Conversion of Reclaimed Vegetable Oil into Biodiesel
Prereq: 5.13 and 5.363
U (Spring; partial term)
1-2-1 units
Presents the theoretical and practical fundamentals of continuous flow synthesis, wherein pumps, tubes, and connectors are used to conduct chemical reactions instead of flasks, beakers, etc. Focuses on a catalytic reaction that converts natural vegetable oil into biodiesel that can be used in a variety of combustion engines. Provides instruction in several important organic chemistry experimental techniques, including purification by extraction, rotary evaporation, acid-base titration, gas chromatography (GC), and $^1$H NMR.
T. Jamison

5.372 Chemistry of Renewable Energy
Prereq: 5.03 and 5.352
U (Fall; partial term)
1-2-1 units
Introduces the electrochemical processes that underlie renewable energy storage and recovery. Students investigate charge transfer reactions at electrode surfaces that are critical to the operation of advanced batteries, fuel cells, and electrolyzers. Develops basic theory behind inner- and outer-sphere charge transfer reactions at interfaces and applies this theory to construct mechanistic models for important energy conversion reactions including the reduction of $O_2$ to water and the reduction of protons to $H_2$. Students will also synthesize new catalytic materials for these reactions and investigate their relative performance.
Y. Surendranath

5.373 Dinitrogen Cleavage
Prereq: 5.03 and 5.363; Coreq: 5.61
U (Fall; partial term)
1-2-1 units
Introduces the research area of small-molecule activation by transition-element complexes. Covers techniques such as glove-box methods for synthesis for exclusion of oxygen and water; filtration, reaction mixture concentration, and recrystallization under a dinitrogen atmosphere and under static vacuum. Characterization methods include proton NMR spectroscopy of both paramagnetic and diamagnetic systems, Evans method magnetic susceptibility measurement, UV-Vis spectroscopy, and infrared spectroscopy of a metal-nitrogen triple bond system.
C. Cummins

5.381 Quantum Dots
Prereq: 5.353 and 5.61
U (Spring; partial term)
1-2-1 units
Covers synthesis of a discrete size series of quantum dots, followed by synthesis of a single size of core/shell quantum dots utilizing air-free Schlenk manipulation of precursors. Uses characterization by absorption and fluorescence spectroscopies to rationalize the compositional/size dependence of the shell on the electronic structure of the quantum dots. Students acquire time traces of the fluorescence of single core and core/shell quantum dots using single molecule spectroscopic tools. The fluorescence on/off blinking distribution observed will be fit to a standard model. Students use Matlab for computational modeling of the electron and hole wavefunction in core and core/shell quantum dots. Analyzes several commercial applications of quantum dot technologies.
M. Bawendi

5.382 Time- and Frequency-resolved Spectroscopy of Photosynthesis
Prereq: 5.07(J), 5.61, or 7.05; Coreq: 5.361
U (Spring; partial term)
1-2-2 units
Uses time- and frequency-resolved fluorescence measurements to investigate photosynthetic light harvesting and energy transfer.
G. Schlau-Cohen
5.383 Fast-flow Peptide and Protein Synthesis
Prereq: 5.363 and (5.07[J] or 7.05)
U (Spring; partial term)
1-2-1 units

Develops understanding of both the theory and practice of fundamental techniques in biological chemistry, including chemical reactivity (amide-bond formation, solid phase synthesis, disulfide bond formation, and protecting group chemistry); separation science for purification and analysis, such as preparative HPLC and MALDI-TOF MS; and protein structure-function relationships (protein folding and binding). Periodically, guest lecturers from the local biotech research community will describe practical applications in industry.

B. Pentelute

5.39 Research and Communication in Chemistry (New)
Prereq: An approved research experience and permission of instructor
U (Spring)
2-12-6 units

Independent research under the direction of a member of the Chemistry Department faculty. Allows students with a strong interest in independent research to fulfill part of the laboratory requirement for the Chemistry Department Program in the context of a research laboratory at MIT. The research must be conducted on the MIT campus and be a continuation of a previous 12-unit UROP project or full-time work over the summer. Instruction and practice in written and oral communication is provided, culminating in a poster presentation of the work at the annual departmental UROP symposium and a research publication-style writeup of the results. Permission of the faculty research supervisor and the Chemistry Education Office must be obtained in advance.

A. Radosevich

5.43 Advanced Organic Chemistry
Prereq: 5.13
U (Fall)
4-0-8 units
Credit cannot also be received for 5.53

Reaction mechanisms in organic chemistry: methods of investigation, relation of structure to reactivity, and reactive intermediates. Photochemistry and organometallic chemistry, with an emphasis on fundamental reactivity, mechanistic studies, and applications in organic chemistry.

T. Swager

5.44 Organometallic Chemistry
Prereq: 5.061, 5.43, 5.47, or permission of instructor
G (Spring; first half of term)
2-0-4 units

Examination of the most important transformations of organotransition-metal species. Emphasizes basic mechanisms of their reactions, structure-reactivity relationships, and applications in synthesis.

Staff

5.45 Heterocyclic Chemistry
Prereq: 5.511 and 5.53
G (Spring; first half of term)
2-0-4 units

Provides an introduction to the chemistry of heterocyclic compounds. Surveys synthesis and reactivity of the major classes of heterocyclic organic compounds. Discusses the importance of these molecules in the pharmaceutical and other industries.

S. Buchwald

5.46 NMR Spectroscopy and Organic Structure Determination
Prereq: 5.43
G (Spring; first half of term)
2-0-4 units

Applications of 1-D and 2-D $^1$H and $^{13}$C NMR spectroscopy to organic structure determination.

W. Massesfki

5.47 Tutorial in Organic Chemistry
Prereq: 5.43 and permission of instructor
G (Fall; partial term)
2-0-4 units

Systematic review of basic principles concerned with the structure and transformations of organic molecules. Problem-solving workshop format. The program is intended primarily for first-year graduate students with a strong interest in organic chemistry. Meets during the month of September.

R. L. Danheiser

5.511 Synthetic Organic Chemistry I
Prereq: 5.43
G (Fall; partial term)
3-0-9 units

Introduction to the design of syntheses of complex organic compounds.

R. L. Danheiser
5.512 Synthetic Organic Chemistry II  
Prereq: 5.511  
G (Spring; second half of term)  
Not offered regularly; consult department  
2-0-4 units  

General methods and strategies for the synthesis of complex organic compounds.  
_Staff_

5.52 Advanced Biological Chemistry  
Prereq: Permission of instructor  
G (Fall)  
2-2-8 units  

Concepts and methods of biochemistry, with emphasis on quantitative aspects of problem analysis and fundamentals of experimental methods. Intended for first-year graduate students with a strong interest in biological chemistry.  
_R. Raines_

5.53 Molecular Structure and Reactivity  
Prereq: 5.13 and 5.60  
G (Fall; partial term)  
3-0-6 units  
Credit cannot also be received for 5.43  

Reaction mechanisms in organic chemistry: methods of investigation, relation of structure to reactivity, and reactive intermediates.  
_A. Wendlandt_

5.54[J] Frontiers in Chemical Biology  
Same subject as 7.540[J], 20.554[J]  
Prereq: 5.07[J], 5.13, 7.06, and permission of instructor  
G (Fall)  
3-0-9 units  

Introduction to current research at the interface of chemistry, biology, and bioengineering. Topics include imaging of biological processes, metabolic pathway engineering, protein engineering, mechanisms of DNA damage, RNA structure and function, macromolecular machines, protein misfolding and disease, metabolomics, and methods for analyzing signaling network dynamics. Lectures are interspersed with class discussions and student presentations based on current literature.  
_L. Kiessling, M. Shoulders_

5.56 Molecular Structure and Reactivity II  
Prereq: 5.53 or permission of instructor  
Acad Year 2018-2019: Not offered  
Acad Year 2019-2020: G (Spring; second half of term)  
2-0-4 units  

Application of physical principles and methods to contemporary problems of interest in organic and polymer chemistry.  
_J. Johnson_

5.561 Chemistry in Industry  
Prereq: 5.03, 5.13, and (5.07[J] or 7.05)  
G (Spring; second half of term)  
2-0-4 units  

Examination of recent advances in organic, biological, and inorganic and physical chemical research in industry. Taught in seminar format with participation by scientists from industrial research laboratories.  
_R. L. Danheiser_

5.60 Thermodynamics and Kinetics  
Prereq: Calculus II (GIR) and Chemistry (GIR)  
U (Fall, Spring)  
5-0-7 units. REST  

Equilibrium properties of macroscopic systems. Basic thermodynamics: state of a system, state variables. Work, heat, first law of thermodynamics, thermochemistry. Second and third law of thermodynamics: entropy and free energy, including the molecular basis for these thermodynamic functions. Phase equilibrium and properties of solutions. Chemical equilibrium of reactions in gas and solution phases. Rates of chemical reactions. Special attention to thermodynamics related to global energy issues. Meets with 5.601 first half of term and 5.602 second half of term. Credit cannot also be received for 5.601 or 5.602.  
_M. Bawendi, A. Shalek, J. Cao, A. Willard_

5.601 Thermodynamics I (New)  
Prereq: Calculus II (GIR) and Chemistry (GIR)  
U (Fall, Spring; first half of term)  
2-0-4 units  

Basic thermodynamics: state of a system, state variables. Work, heat, first law of thermodynamics, thermochemistry. Second and third law of thermodynamics: entropy and free energy, including the molecular basis for these thermodynamic functions. Equilibrium properties of macroscopic systems. Special attention to thermodynamics related to global energy issues and biological systems. Combination of 5.601 and 5.602 counts as a REST subject.  
_M. Bawendi, A. Shalek_
5.602 Thermodynamics II and Kinetics (New)
Prereq: 5.601
U (Fall, Spring; second half of term)
2-0-4 units
Free energy and chemical potential. Phase equilibrium and properties of solutions. Chemical equilibrium of reactions. Rates of chemical reactions. Special attention to thermodynamics related to global energy issues and biological systems. Combination of 5.601 and 5.602 counts as a REST subject.
Consult M. Bawendi, A. Shalek

5.61 Physical Chemistry
Prereq: Calculus II (GIR), Chemistry (GIR), and Physics II (GIR)
U (Fall)
5-0-7 units. REST
Introductory quantum chemistry; particles and waves; wave mechanics; atomic structure and the Periodic Table; valence and molecular orbital theory; molecular structure; and photochemistry.
Meets with 5.611 first half of term and 5.612 second half of term.
Credit cannot also be received for 5.611 or 5.612.
M. Hong, G. Schlau-Cohen

5.611 Introduction to Spectroscopy (New)
Prereq: Calculus II (GIR), Chemistry (GIR), and Physics II (GIR)
U (Fall; first half of term)
2-0-4 units
Introductory quantum chemistry; particles and waves; wave mechanics; harmonic oscillator; applications to IR, Microwave and NMR spectroscopy. Meets with 5.61 first half of term. Combination of 5.611 and 5.612 counts as a REST subject.
M. Hong, G. Schlau-Cohen

5.612 Electronic Structure of Molecules (New)
Prereq: Calculus II (GIR), Chemistry (GIR), and Physics II (GIR)
U (Fall; second half of term)
2-0-4 units
Introductory electronic structure; atomic structure and the Periodic Table; valence and molecular orbital theory; molecular structure, and photochemistry. Meets with 5.61 second half of term. Combination of 5.611 and 5.612 counts as a REST subject.
M. Hong, G. Schlau-Cohen

5.62 Physical Chemistry
Prereq: 5.60 and 5.61
U (Spring)
4-0-8 units
Elementary statistical mechanics; transport properties; kinetic theory; solid state; reaction rate theory; and chemical reaction dynamics.
J. Cao, S. Ceyer

5.64[J] Frontiers of Interdisciplinary Science in Human Health and Disease
Same subject as HST.539[J]
Prereq: 5.13, 5.60, and (5.07[J] or 7.05)
G (Spring)
3-0-9 units
Introduces major principles, concepts, and clinical applications of biophysics, biophysical chemistry, and systems biology. Emphasizes biological macromolecular interactions, biochemical reaction dynamics, and genomics. Discusses current technological frontiers and areas of active research at the interface of basic and clinical science. Provides integrated, interdisciplinary training and core experimental and computational methods in molecular biochemistry and genomics.
A. Shalek

5.68[J] Kinetics of Chemical Reactions
Same subject as 10.652[J]
Prereq: 5.62, 10.37, or 10.65
Acad Year 2018-2019: G (Fall)
Acad Year 2019-2020: Not offered
3-0-6 units
Experimental and theoretical aspects of chemical reaction kinetics, including transition-state theories, molecular beam scattering, classical techniques, quantum and statistical mechanical estimation of rate constants, pressure-dependence and chemical activation, modeling complex reacting mixtures, and uncertainty/ sensitivity analyses. Reactions in the gas phase, liquid phase, and on surfaces are discussed with examples drawn from atmospheric, combustion, industrial, catalytic, and biological chemistry.
W. H. Green

5.697[J] Computational Chemistry
Same subject as 10.437[J]
Subject meets with 5.698[J], 10.637[J]
Prereq: None
U (Fall)
3-0-9 units
See description under subject 10.437[J].
H. J. Kulik
5.698[J] Quantum Chemical Simulation
Same subject as 10.637[J]
Subject meets with 5.697[J], 10.437[J]
Prereq: None
G (Fall)
3-0-9 units
See description under subject 10.637[J].
*H. J. Kulik*

5.70[J] Statistical Thermodynamics
Same subject as 10.546[J]
Prereq: 5.60 or permission of instructor
G (Fall)
3-0-9 units
Develops classical equilibrium statistical mechanical concepts for application to chemical physics problems. Basic concepts of ensemble theory formulated on the basis of thermodynamic fluctuations. Examples of applications include Ising models, lattice models of binding, ionic and non-ionic solutions, liquid theory, polymer and protein conformations, phase transition, and pattern formation. Introduces computational techniques with examples of liquid and polymer simulations.
*J. Cao, A. Willard*

5.72 Statistical Mechanics
Prereq: 5.70[J] or permission of instructor
Acad Year 2018-2019: G (Spring; second half of term)
Acad Year 2019-2020: Not offered
2-0-4 units
*J. Cao*

5.73 Introductory Quantum Mechanics I
Prereq: 5.61, 8.03, and 18.03
G (Fall)
3-0-9 units
Presents the fundamental concepts of quantum mechanics: wave properties, uncertainty principles, Schrodinger equation, and operator and matrix methods. Includes applications to one-dimensional potentials (harmonic oscillator), three-dimensional centrosymmetric potentials (hydrogen atom), and angular momentum and spin. Approximation methods include WKB, variational principle, and perturbation theory.
*R. Field*

5.74 Introductory Quantum Mechanics II
Prereq: 5.73
G (Spring)
3-0-9 units
Time-dependent quantum mechanics and spectroscopy. Topics include perturbation theory, two-level systems, light-matter interactions, relaxation in quantum systems, correlation functions and linear response theory, and nonlinear spectroscopy.
*K. Nelson, G. Schlau-Cohen*

5.78 Biophysical Chemistry Techniques
Subject meets with 7.71
Prereq: 5.07[J] or 7.05
G (Spring)
2-0-4 units
Presents principles of macromolecular crystallography that are essential for structure determinations. Topics include crystallization, diffraction theory, symmetry and space groups, data collection, phase determination methods, model building, and refinement. Discussion of crystallography theory complemented with exercises such as crystallization, data processing, and model building. Meets with 7.71 when offered concurrently. Enrollment limited.
*C. Drennan*

5.80 Advanced Topics of Current Special Interest
Prereq: 18.03 and (5.61 or 8.04)
G (Fall, Spring)
3-0-9 units
Advanced topics of current special interest.
*Staff*

5.83 Advanced NMR Spectroscopy
Prereq: 5.73 or permission of instructor
G (Spring; second half of term)
2-0-4 units
Offers a classical and quantum mechanical description of nuclear magnetic resonance (NMR) spectroscopy. The former includes key concepts such as nuclear spin magnetic moment, Larmor precession, Bloch equations, the rotating frame, radio-frequency pulses, vector model of pulsed NMR, Fourier transformation in 1D and nD NMR, orientation dependence of nuclear spin frequencies, and NMR relaxation. The latter covers nuclear spin Hamiltonians, density operator and its time evolution, the interaction representation, Average Hamiltonian Theory for multipulse experiments, and analysis of some common pulse sequences in solution and solid-state NMR.
*M. Hong*
5.891 Independent Study in Chemistry for Undergraduates
Prereq: None
U (Fall, IAP, Spring, Summer)
Units arranged
Can be repeated for credit.

Program of independent study under direction of Chemistry faculty member. May not substitute for required courses for the Chemistry major or minor.
Staff

5.892 Independent Study in Chemistry for Undergraduates
Prereq: None
U (Fall, IAP, Spring, Summer)
Units arranged [P/D/F]
Can be repeated for credit.

Program of independent study under direction of Chemistry faculty member. May not substitute for required courses for the Chemistry major or minor.
Staff

5.90 Problems in Chemistry
Prereq: Permission of instructor
G (Fall, Spring, Summer)
Units arranged [P/D/F]
Can be repeated for credit.

Directed research and study of special chemical problems. For Chemistry graduate students only.
R. W. Field

5.913 Seminar in Organic Chemistry
Prereq: Permission of instructor
G (Fall, Spring)
2-0-1 units
Can be repeated for credit.

Discusses current journal publications in organic chemistry by graduate students and staff members.
R. L. Danheiser

5.921 Seminar in Biological Chemistry
Prereq: Permission of instructor
G (Fall, Spring)
2-0-1 units
Can be repeated for credit.

Discusses topics of current interest in biological chemistry by graduate students and staff.
M. Shoulders

5.931 Seminar in Physical Chemistry
Prereq: 5.60
G (Fall, Spring)
2-0-1 units
Can be repeated for credit.

Discusses topics of current interest in physical chemistry by staff members and students.
A. Willard

5.941 Seminar in Inorganic Chemistry
Prereq: 5.03
G (Fall, Spring)
2-0-1 units
Can be repeated for credit.

Discusses current research in inorganic chemistry by graduate students and staff.
M. Dincă

5.95[J] Teaching College-Level Science and Engineering
Same subject as 1.95[J], 7.59[J], 8.395[J], 18.094[J]
Subject meets with 2.978
Prereq: None
Acad Year 2018-2019: Not offered
Acad Year 2019-2020: G (Fall)
2-0-2 units

Participatory seminar focuses on the knowledge and skills necessary for teaching science and engineering in higher education. Topics include theories of adult learning; course development; promoting active learning, problem solving, and critical thinking in students; communicating with a diverse student body; using educational technology to further learning; lecturing; creating effective tests and assignments; and assessment and evaluation. Students research and present a relevant topic of particular interest. Appropriate for both novices and those with teaching experience.
J. Rankin

5.THG Graduate Thesis
Prereq: Permission of instructor
G (Fall, IAP, Spring, Summer)
Units arranged
Can be repeated for credit.

Program of research leading to the writing of a PhD thesis; to be arranged by the student and an appropriate MIT faculty member.
R. W. Field
5.THU Undergraduate Thesis
Prereq: Permission of instructor
U (Fall, IAP, Spring, Summer)
Units arranged
Can be repeated for credit.

Program of original research under supervision of a chemistry faculty member, culminating with the preparation of a thesis. Ordinarily requires equivalent of two terms of research with chemistry department faculty member.

Staff

5.UR Undergraduate Research
Prereq: None
U (Fall, IAP, Spring, Summer)
Units arranged [P/D/F]
Can be repeated for credit.

Program of research to be arranged by the student and a departmental faculty member. Research can be applied toward undergraduate thesis.

C. C. Cummins

5.URG Undergraduate Research
Prereq: None
U (Fall, IAP, Spring, Summer)
Units arranged
Can be repeated for credit.

Program of research to be arranged by the student and a departmental faculty member. May be taken for up to 12 units per term, not to exceed a cumulative total of 48 units. A 10-page paper summarizing research is required.

C. C. Cummins
