

## BIOLOGICAL ENGINEERING (COURSE 20)

### 20.001 Introduction to Professional Success and Leadership in Biological Engineering

Prereq: None  
U (Fall)  
1-0-2 units

Interactive introduction to the discipline of Biological Engineering through presentations by alumni practitioners, with additional panels and discussions on skills for professional development. Presentations emphasize the roles of communication through writing and speaking, building and maintaining professional networks, and interpersonal and leadership skills in building successful careers. Provides practical advice about how to prepare for job searches and graduate or professional school applications from an informed viewpoint. Prepares students for UROPs, internships, and selection of BE electives.

*L. Griffith*

### 20.005 Ethics for Engineers (New)

Subject meets with 1.082[], 2.900[], 6.9041, 6.904[], 10.01[], 16.676[], 22.014[]  
Prereq: None  
U (Fall, Spring)  
2-0-7 units

Integrates classical readings that provide an overview of ethics with a survey of case studies that focus on ethical problems arising in the practice of engineering. Readings taken from a variety of sources, such as Aristotle, Machiavelli, Bacon, Hobbes, Locke, the Founding Fathers, and the Bible. Case studies include written analyses and films that address engineering disasters, biotechnology, court cases, ethical codes, and the ultimate scope and aims of engineering. Students taking independent inquiry version 6.9041 expand the scope of their term project. Students taking 20.005 focus their term project on a problem in biological engineering in which there are intertwined ethical and technical issues.

*D. Doneson, B. L. Trout*

### 20.020 Introduction to Biological Engineering Design Using Synthetic Biology

Subject meets with 20.385  
Prereq: None  
U (Spring)  
Not offered regularly; consult department  
3-3-3 units

Project-based introduction to the engineering of synthetic biological systems. Throughout the term, students develop projects that are responsive to real-world problems of their choosing, and whose solutions depend on biological technologies. Lectures, discussions, and studio exercises will introduce components and control of prokaryotic and eukaryotic behavior; DNA synthesis, standards, and abstraction in biological engineering; and issues of human practice, including biological safety, security, ethics, and ownership, sharing, and innovation. Preference to freshmen.

*N. Kuldell*

### 20.051 NEET Sophomore Seminar: Living Machines (New)

Prereq: None  
U (Fall, Spring)  
3-0-3 units  
Can be repeated for credit.

Seminar spanning fall and spring terms for sophomores enrolled in the Living Machines New Engineering Education Transformation (NEET) thread. Focuses on topics around "body-on-a-chip" technology via guest lectures and research discussions. May be repeated once for credit.

*E. Alm, L. Griffith, T. Kassis*

### 20.052 NEET Junior Seminar: Living Machines (New)

Prereq: None  
U (Fall, Spring)  
3-0-3 units  
Can be repeated for credit.

Seminar spanning fall and spring terms for juniors enrolled in the Living Machines New Engineering Education Transformation (NEET) thread. Focuses on topics around "body-on-a-chip" technology via guest lectures and research discussions. May be repeated once for credit.

*E. Alm, L. Griffith, T. Kassis*

**20.053 NEET Senior Seminar: Living Machines (New)**

Prereq: None

Acad Year 2018-2019: Not offered

Acad Year 2019-2020: U (Fall, Spring)

3-0-3 units

Can be repeated for credit.

Seminar spanning fall and spring terms for seniors enrolled in the Living Machines New Engineering Education Transformation (NEET) thread. Focuses on topics around "body-on-a-chip" technology via guest lectures and research discussions. May be repeated once for credit.

*E. Alm, L. Griffith, T. Kassis*

**20.101 Metakaryotic Biology and Epidemiology (20.002)**

Subject meets with 20.Ao2

Prereq: None

U (Fall)

2-0-4 units

Introduces non-eukaryotic, "metakaryotic" cells with hollow bell-shaped nuclei that serve as the stem cells of human fetal/juvenile growth and development as well as of tumors and atherosclerotic plaques. Studies the relationship of lifetime growth and mutations of metakaryotic stem cells to age-specific death rates. Considers the biological bases of treatment protocols found to kill metakaryotic cancer stem cells *in vitro* and in human pancreatic cancers *in vivo*.

*W. G. Thilly*

**20.102 Metakaryotic Stem Cells in Carcinogenesis: Origins and Cures**

Subject meets with 20.215

Prereq: Biology (GIR), Calculus II (GIR), and Chemistry (GIR)

U (Fall)

3-0-9 units

Metakaryotic stem cells of organogenesis, wound healing, and the pathogenic lesions of cancers and atherosclerotic plaques. Metakaryotic cell resistance to x-ray- and chemo-therapies. Common drug treatment protocols lethal to metakaryotic cancer stem cells *in vivo* first clinical trial against pancreatic cancer. Application of a hypermutable/mutator stem cell model to the age-specific mortality from clonal diseases, and the expected responses to metakaryocidal drugs in attempted cure and prevention of tumors or atherosclerotic plaques. Students taking 20.215 responsible for *de novo* computer modeling.

*E. V. Gostjeva, W. G. Thilly*

**20.104[J] Environmental Cancer Risks, Prevention, and Therapy**

Same subject as 1.081[J]

Prereq: Biology (GIR), Calculus II (GIR), and Chemistry (GIR)

U (Spring)

3-0-9 units

Analysis of the history of cancer and vascular disease mortality rates in predominantly European- and African-American US cohorts, 1895-2016, to discover specific historical shifts. Explored in terms of contemporaneously changing environmental risk factors: air-, food- and water-borne chemicals; subclinical infections; diet and lifestyles. Special section on occupational risk factors. Considers the hypotheses that genetic and/or environmental factors affect metakaryotic stem cell mutation rates in fetuses and juveniles and/or their growth rates of preneoplastic in adults.

*W. Thilly, R. McCunney*

**20.106[J] Systems Microbiology**

Same subject as 1.084[J]

Prereq: Biology (GIR) and Chemistry (GIR)

U (Fall)

3-0-9 units

Introductory microbiology from a systems perspective - considers microbial diversity and the integration of data from a molecular, cellular, organismal, and ecological context to understand the interaction of microbial organisms with their environment. Special emphasis on specific viral, bacterial, and eukaryotic microorganisms and their interaction with animal hosts with focus on contemporary problems in areas such as vaccination, emerging disease, antimicrobial drug resistance, and toxicology.

*E. Alm, J. Niles*

**20.109 Laboratory Fundamentals in Biological Engineering**

Prereq: Biology (GIR), Chemistry (GIR), 6.0002, 18.03, and 20.110[J]

U (Fall, Spring)

2-8-5 units. Institute LAB

Introduces experimental biochemical and molecular techniques from a quantitative engineering perspective. Experimental design, data analysis, and scientific communication form the underpinnings of this subject. Examples of discovery-based experimental modules include DNA engineering in which students design, construct, and use genetic material; parts engineering, which emphasizes protein design and quantitative assessment of protein performance; systems engineering, in which students consider genome-wide consequences of genetic perturbations; and biomaterials engineering, in which students use biologically-encoded devices to design and build materials. Students complete some laboratory time online in advance of each class. Enrollment limited; priority to Course 20 majors.

*A. Belcher, B. Engelward, M. Jonas, N. Lyell, L. McClain, A. Belcher, L. Samson, M. Jonas, N. Lyell, L. McClain*

**20.110[J] Thermodynamics of Biomolecular Systems**

Same subject as 2.772[J]

Prereq: Calculus II (GIR), Chemistry (GIR), and Physics I (GIR)

U (Fall)

5-0-7 units. REST

Equilibrium properties of macroscopic and microscopic systems. Basic thermodynamics: state of a system, state variables. Work, heat, first law of thermodynamics, thermochemistry. Second and third law of thermodynamics: entropy and its statistical basis, Gibbs function. Chemical equilibrium of reactions in gas and solution phase. Macromolecular structure and interactions in solution. Driving forces for molecular self-assembly. Binding cooperativity, solvation, titration of macromolecules.

*M. Birnbaum C. Voigt*

**20.129[J] Biological Circuit Engineering Laboratory**

Same subject as 6.129[J]

Prereq: Biology (GIR) and Calculus II (GIR)

U (Spring)

2-8-2 units. Institute LAB

See description under subject 6.129[J]. Enrollment limited.

*T. Lu, R. Weiss*

**20.200 Biological Engineering Seminar**

Prereq: Permission of instructor

G (Fall, Spring)

1-0-2 units

Can be repeated for credit.

Weekly one-hour seminars covering graduate student research and presentations by invited speakers. Limited to BE graduate students.

*B. Engelward*

**20.201 Fundamentals of Drug Development**

Prereq: Permission of instructor

G (Fall, Spring)

4-0-8 units

Addresses the scientific basis for the development of new drugs. First half of term begins with an overview of the drug discovery process, followed by fundamental principles of pharmacokinetics, pharmacodynamics, metabolism, and the mechanisms by which drugs cause therapeutic and toxic responses. Second half applies principles to case studies and literature discussions of current problems with specific drugs, drug classes, and therapeutic targets.

*P. C. Dedon, R. Sasisekharan*

**20.202 In vivo Models: Principles and Practices**

Prereq: Permission of instructor

Acad Year 2018-2019: Not offered

Acad Year 2019-2020: G (Spring)

1-1-4 units

Selected aspects of anatomy, histology, immuno-cytochemistry, in situ hybridization, physiology, and cell biology of mammalian organisms and their pathogens. Subject material integrated with principles of toxicology, in vivo genetic engineering, and molecular biology. A lab/demonstration period each week involves experiments in anatomy (in vivo), physiology, and microscopy to augment the lectures. Offered first half of spring term.

*J. G. Fox, B. Marini, M. Whary*

**20.203[J] Neurotechnology in Action**

Same subject as 9.123[J]

Prereq: Permission of instructor

G (Spring)

3-6-3 units

See description under subject 9.123[J].

*E. Boyden, M. Jonas*

**20.205[J] Principles and Applications of Genetic Engineering for Biotechnology and Neuroscience**

Same subject as 9.26[J]

Prereq: (7.29[J] or 9.01) and (7.28, 7.32, or 20.020)

U (Spring)

3-0-9 units

See description under subject 9.26[J].

*F. Zhang*

**20.207 Biotechnologies in Infectious Disease**

Prereq: 7.06 and permission of instructor

Acad Year 2018-2019: Not offered

Acad Year 2019-2020: G (Spring)

3-0-9 units

Team-based exploration of current and emerging technologies used in the surveillance, diagnosis, understanding, treatment and prevention of infectious diseases, drawing on basic science and bio-engineering principles. In a term-long project, student teams develop novel technologies to solve major problems in global infectious disease, with a trajectory to a start-up company. Industry experts and academic entrepreneurs present case studies throughout the term, including technology innovations, regulatory sciences, intellectual property and clinical development. Term culminates with team presentations to a panel of industry and scientific leaders.

*P. C. Dedon, R. Sasisekharan*

**20.213 Genome Stability and Engineering in the Context of Diseases, Drugs, and Public Health**

Prereq: 5.07[], 7.05, or permission of instructor

Acad Year 2018-2019: Not offered

Acad Year 2019-2020: U (Spring; second half of term)

4-0-5 units

Studies how DNA damage leads to diseases, and how DNA repair modulates cancer risk and treatment. Also covers how DNA repair impacts genetic engineering, whether by targeted gene therapy or CRISPR-mediated genetic changes. Students gain a public health perspective by examining how DNA-damaging agents in our environment can lead to downstream cancer. Explores the underlying chemical, molecular and biochemical processes of DNA damage and repair, and their implications for disease susceptibility and treatment.

*B. P. Engelward*

**20.215 Macroepidemiology, Population Genetics, and Stem Cell Biology of Human Clonal Diseases**

Subject meets with 20.102

Prereq: Calculus II (GIR) and 1.00

G (Fall)

3-0-15 units

Studies the logic and technology needed to discover genetic and environmental risks for common human cancers and vascular diseases. Includes an introduction to metakaryotic stem cell biology. Analyzes large, organized historical public health databases using quantitative cascade computer models that include population stratification of stem cell mutation rates in fetal/juvenile tissues and growth rates in preneoplastic colonies and atherosclerotic plaques. Means to test hypotheses (CAST) that certain genes carry mutations conferring risk for common cancers via genetic analyses in large human cohorts. Involves *de novo* computer modeling of a lifetime disease experience or test of a student-developed hypothesis.

*W. G. Thilly*

**20.219 Selected Topics in Biological Engineering**

Prereq: Permission of instructor

G (Fall, Spring)

Units arranged

Can be repeated for credit.

Detailed discussion of selected topics of current interest. Classwork in various areas not covered by regular subjects.

*Staff*

**20.230[] Immunology (New)**

Same subject as 7.23[]

Subject meets with 7.63[], 20.630[]

Prereq: 7.06

U (Spring)

5-0-7 units

See description under subject 7.23[].

*S. Spranger, M. Birnbaum*

**20.260 Computational Analysis of Biological Data**

Prereq: Permission of instructor

U (IAP)

3-0-3 units

Presents foundational methods for analysis of complex biological datasets. Covers fundamental concepts in probability, statistics, and linear algebra underlying computational tools that enable generation of biological insights. Assignments focus on practical examples spanning basic science and medical applications. Assumes basic knowledge of calculus and programming.

*E. Alm, D. Lauffenburger*

**20.305[] Principles of Synthetic Biology**

Same subject as 6.580[]

Subject meets with 6.589[], 20.405[]

Prereq: None

U (Fall)

3-0-9 units

Introduces the basics of synthetic biology, including quantitative cellular network characterization and modeling. Considers the discovery and genetic factoring of useful cellular activities into reusable functions for design. Emphasizes the principles of biomolecular system design and diagnosis of designed systems. Illustrates cutting-edge applications in synthetic biology and enhances skills in analysis and design of synthetic biological applications. Students taking graduate version complete additional assignments.

*R. Weiss*

**20.309[J] Instrumentation and Measurement for Biological Systems**

Same subject as 2.673[J]

Subject meets with 20.409

Prereq: (Biology (GIR), Physics II (GIR), 6.0002, and 18.03) or permission of instructor

U (Fall, Spring)

3-6-3 units

Sensing and measurement aimed at quantitative molecular/cell/tissue analysis in terms of genetic, biochemical, and biophysical properties. Methods include light and fluorescence microscopies, and electro-mechanical probes (atomic force microscopy, optical traps, MEMS devices). Application of statistics, probability, signal and noise analysis, and Fourier techniques to experimental data. Enrollment limited; preference to Course 20 undergraduates.

*P. Blainey, S. Manalis, E. Frank, S. Wasserman, J. Bagnall, E. Boyden, P. So*

**20.310[J] Molecular, Cellular, and Tissue Biomechanics**

Same subject as 2.797[J], 3.053[J], 6.024[J]

Prereq: Biology (GIR), (2.370 or 20.110[J]), and (3.016 or 18.03)

U (Spring)

4-0-8 units

Develops and applies scaling laws and the methods of continuum mechanics to biomechanical phenomena over a range of length scales. Topics include structure of tissues and the molecular basis for macroscopic properties; chemical and electrical effects on mechanical behavior; cell mechanics, motility and adhesion; biomembranes; biomolecular mechanics and molecular motors. Experimental methods for probing structures at the tissue, cellular, and molecular levels.

*M. Bathe, A. Grodzinsky*

**20.315 Physical Biology**

Subject meets with 8.241, 20.415

Prereq: 5.60, 20.110[J], or permission of instructor

U (Spring)

3-0-9 units

Focuses on current major research topics in quantitative, physical biology. Covers synthetic structural biology, synthetic cell biology, microbial systems biology and evolution, cellular decision making, neuronal circuits, and development and morphogenesis. Emphasizes current motivation and historical background, state-of-the-art measurement methodologies and techniques, and quantitative physical modeling frameworks. Experimental techniques include structural biology, next-generation sequencing, fluorescence imaging and spectroscopy, and quantitative biochemistry. Modeling approaches include stochastic rate equations, statistical thermodynamics, and statistical inference. Students taking graduate version complete additional assignments.

*J. Gore, I. Cisse*

**20.320 Analysis of Biomolecular and Cellular Systems**

Prereq: 6.0002, 18.03, and 20.110[J]; *Coreq: 5.07[J] or 7.05*

U (Fall)

4-0-8 units

Analysis of molecular and cellular processes across a hierarchy of scales, including genetic, molecular, cellular, and cell population levels. Topics include gene sequence analysis, molecular modeling, metabolic and gene regulation networks, signal transduction pathways and cell populations in tissues. Emphasis on experimental methods, quantitative analysis, and computational modeling.

*F. White, K. D. Wittrup*

**20.330[J] Fields, Forces and Flows in Biological Systems**

Same subject as 2.793[J], 6.023[J]

Prereq: Physics II (GIR) and (2.005, 6.021[J]), or permission of instructor); *Coreq: 20.309[J]*

U (Spring)

4-0-8 units

Introduction to electric fields, fluid flows, transport phenomena and their application to biological systems. Flux and continuity laws, Maxwell's equations, electro-quasistatics, electro-chemical-mechanical driving forces, conservation of mass and momentum, Navier-Stokes flows, and electrokinetics. Applications include biomolecular transport in tissues, electrophoresis, and microfluidics.

*J. Han, S. Manalis*

**20.334 Biological Systems Modeling**

Prereq: 20.330[] or permission of instructor

U (Fall; first half of term)

1-0-5 units

Practices the use of modern numerical analysis tools (e.g., COMSOL) for biological systems with multi-physics behavior. Covers modeling of diffusion, reaction, convection and other transport mechanisms. Analysis of microfluidic devices as examples. Discusses practical issues and challenges in numerical modeling. No prior knowledge of modeling software required. Includes weekly modeling homework and one final modeling project. For Fall 2018, class is comprised of a combination of online material and remote lectures given during evening hours.

*J. Han*

**20.345[] Bioinstrumentation Project Lab**

Same subject as 6.123[]

Prereq: 20.309[], (Biology (GIR) and (2.004 or 6.003)), or permission of instructor

U (Spring)

2-7-3 units

In-depth examination of instrumentation design, principles and techniques for studying biological systems, from single molecules to entire organisms. Lectures cover optics, advanced microscopy techniques, electronics for biological measurement, magnetic resonance imaging, computed tomography, MEMs, microfluidic devices, and limits of detection. Students select two lab exercises during the first half of the semester and complete a final design project in the second half. Lab emphasizes design process and skillful realization of a robust system. Enrollment limited; preference to Course 20 majors and minors.

*E. Boyden, M. Jonas, S. F. Nagle, P. So, S. Wasserman, M. F. Yanik*

**20.352 Principles of Neuroengineering**

Subject meets with 9.422[], 20.452[], MAS.881[]

Prereq: Permission of instructor

U (Fall)

3-0-9 units

Covers how to innovate technologies for brain analysis and engineering, for accelerating the basic understanding of the brain, and leading to new therapeutic insight and inventions. Focuses on using physical, chemical and biological principles to understand technology design criteria governing ability to observe and alter brain structure and function. Topics include optogenetics, noninvasive brain imaging and stimulation, nanotechnologies, stem cells and tissue engineering, and advanced molecular and structural imaging technologies. Includes design projects. Students taking graduate version complete additional assignments. Designed for students with engineering maturity who are ready for design.

*E. S. Boyden, III*

**20.361[] Molecular and Engineering Aspects of Biotechnology**

Same subject as 7.37[], 10.441[]

Prereq: (7.06 and (2.005, 3.012, 5.60, or 20.110[])) or permission of instructor

U (Spring)

Not offered regularly; consult department

4-0-8 units

Credit cannot also be received for 7.371

See description under subject 7.37[].

*H. Lodish, L. Griffith*

**20.363[] Biomaterials Science and Engineering**

Same subject as 3.055[]

Subject meets with 3.963[], 20.463[]

Prereq: 3.034, 20.110[], or permission of instructor

Acad Year 2018-2019: Not offered

Acad Year 2019-2020: U (Fall)

3-0-9 units

Covers, at a molecular scale, the analysis and design of materials used in contact with biological systems, and biomimetic strategies aimed at creating new materials based on principles found in biology. Topics include molecular interaction between bio- and synthetic molecules and surfaces; design, synthesis, and processing approaches for materials that control cell functions; and application of materials science to problems in tissue engineering, drug delivery, vaccines, and cell-guiding surfaces. Students taking graduate version complete additional assignments.

*D. Irvine, K. Ribbeck*

**20.365 Engineering the Immune System in Cancer and Beyond**

Subject meets with 20.465

Prereq: (5.60 or 20.110[]) and permission of instructor

U (Spring)

3-0-9 units

Examines strategies in clinical and preclinical development for manipulating the immune system to treat and protect against disease. Begins with brief review of immune system. Discusses interaction of tumors with the immune system, followed by approaches by which the immune system can be modulated to attack cancer. Also covers strategies based in biotechnology, chemistry, materials science, and molecular biology to induce immune responses to treat infection, transplantation, and autoimmunity. Students taking graduate version complete additional assignments.

*D. Irvine*

**20.370[] Cellular Neurophysiology and Computing**

Same subject as 2.791[], 6.021[], 9.21[]

Subject meets with 2.794[], 6.521[], 9.021[], 20.470[], HST.541[]

Prereq: Physics II (GIR), 18.03, and (2.005, 6.002, 6.003, 10.301, 20.110[]), or permission of instructor

U (Fall)

5-2-5 units

See description under subject 6.021[]. Preference to juniors and seniors.

*J. Han, T. Heldt*

**20.375 Applied Developmental Biology and Tissue Engineering**

Subject meets with 20.475

Prereq: (7.06, 20.320, and (7.02[] or 20.109)) or permission of instructor

Acad Year 2018-2019: Not offered

Acad Year 2019-2020: U (Spring)

3-0-9 units

Addresses the integration of engineering and biology design principles to create human tissues and organs for regenerative medicine to drug development. Provides an overview of embryogenesis, how morphogenic phenomena are governed by biochemical and biophysical cues. Analyzes *in vitro* generation of human brain, gut, and other organoids from stem cells. Studies the roles of biomaterials and microreactors in improving organoid formation and function; organoid use in modeling disease and physiology *in vitro*; and engineering and biological principles of reconstructing tissues and organs from postnatal donor cells using biomaterials scaffolds and bioreactors. Includes select applications, such as liver disease, brain disorders, and others. Students taking graduate version complete additional assignments.

*L. Griffith*

**20.380 Biological Engineering Design**

Prereq: 7.06, 20.320, and 20.330[]; *Coreq: 20.309[]*

U (Fall, Spring)

5-0-7 units

Illustrates how knowledge and principles of biology, biochemistry, and engineering are integrated to create new products for societal benefit. Uses case study format to examine recently developed products of pharmaceutical and biotechnology industries: how a product evolves from initial idea, through patents, testing, evaluation, production, and marketing. Emphasizes scientific and engineering principles, as well as the responsibility scientists, engineers, and business executives have for the consequences of their technology. Instruction and practice in written and oral communication provided. Enrollment limited; preference to Course 20 undergraduates.

*J. Collins, A. Koehler, J. Essigmann, K. Ribbeck*

**20.381 Biological Engineering Design II (New)**

Prereq: 20.380 or permission of instructor

U (Spring)

0-12-0 units

Continuation of 20.380 that focuses on practical implementation of design proposals. Student teams choose a feasible scope of work related to their 20.380 design proposals and execute it in the lab.

*M. Jonas, J. Sutton, S. Wasserman*

**20.385 Understanding Current Research in Synthetic Biology**

Subject meets with 20.020

Prereq: (20.109 and 20.320) or permission of instructor

U (Spring)

Not offered regularly; consult department

3-3-3 units

Provides an in-depth understanding of the state of research in synthetic biology. Critical evaluation of primary research literature covering a range of approaches to the design, modeling and programming of cellular behaviors. Focuses on developing the skills needed to read, present and discuss primary research literature, and to manage and lead small teams. Students mentor a small undergraduate team of 20.020 students. Open to advanced students with appropriate background in biology.

*Staff*

**20.390[] Foundations of Computational and Systems Biology**

Same subject as 6.802[]

Subject meets with 6.874[], 20.490, HST.506[]

Prereq: (7.05 and (Biology (GIR), 6.0002, or 6.01)) or permission of instructor

U (Spring)

3-0-9 units

Provides an introduction to computational and systems biology. Includes units on the analysis of protein and nucleic acid sequences, protein structures, and biological networks. Presents principles and methods used for sequence alignment, motif finding, expression array analysis, structural modeling, structure design and prediction, and network analysis and modeling. Techniques include dynamic programming, Markov and hidden Markov models, Bayesian networks, clustering methods, and energy minimization approaches. Exposes students to emerging research areas. Designed for students with strong backgrounds in either molecular biology or computer science. Some foundational material covering basic programming skills, probability and statistics is provided for students with less quantitative backgrounds. Students taking graduate version complete additional assignments.

*D. K. Gifford*

### **20.405[] Principles of Synthetic Biology**

Same subject as 6.589[]

Subject meets with 6.580[], 20.305[]

Prereq: None

G (Fall)

3-0-9 units

Introduces the basics of synthetic biology, including quantitative cellular network characterization and modeling. Considers the discovery and genetic factoring of useful cellular activities into reusable functions for design. Emphasizes the principles of biomolecular system design and diagnosis of designed systems. Illustrates cutting-edge applications in synthetic biology and enhances skills in analysis and design of synthetic biological applications. Students taking graduate version complete additional assignments.

*R. Weiss*

### **20.409 Biological Engineering II: Instrumentation and Measurement**

Subject meets with 2.673[], 20.309[]

Prereq: Permission of instructor

G (Fall, Spring)

2-7-3 units

Sensing and measurement aimed at quantitative molecular/cell/tissue analysis in terms of genetic, biochemical, and biophysical properties. Methods include light and fluorescence microscopies, electronic circuits, and electro-mechanical probes (atomic force microscopy, optical traps, MEMS devices). Application of statistics, probability, signal and noise analysis, and Fourier techniques to experimental data. Limited to 5 graduate students.

*P. Blainey, S. Manalis, S. Wasserman, J. Bagnall, E. Frank, E. Boyden, P. So*

### **20.410[] Molecular, Cellular, and Tissue Biomechanics**

Same subject as 2.798[], 3.971[], 6.524[], 10.537[]

Prereq: Biology (GIR) and (2.002, 2.006, 6.013, 10.301, or 10.302)

Acad Year 2018-2019: Not offered

Acad Year 2019-2020: G (Fall)

3-0-9 units

Develops and applies scaling laws and the methods of continuum mechanics to biomechanical phenomena over a range of length scales. Topics include structure of tissues and the molecular basis for macroscopic properties; chemical and electrical effects on mechanical behavior; cell mechanics, motility and adhesion; biomembranes; biomolecular mechanics and molecular motors. Experimental methods for probing structures at the tissue, cellular, and molecular levels.

*R. D. Kamm, K. J. Van Vliet*

### **20.415 Physical Biology**

Subject meets with 8.241, 20.315

Prereq: Permission of instructor

G (Spring)

3-0-9 units

Focuses on current major research topics in quantitative, physical biology. Topics include synthetic structural biology, synthetic cell biology, microbial systems biology and evolution, cellular decision making, neuronal circuits, and development and morphogenesis. Emphasizes current motivation and historical background, state-of-the-art measurement methodologies and techniques, and quantitative physical modeling frameworks. Experimental techniques include structural biology, next-generation sequencing, fluorescence imaging and spectroscopy, and quantitative biochemistry. Modeling approaches include stochastic rate equations, statistical thermodynamics, and statistical inference. Students taking graduate version complete additional assignments.

*J. Gore, I. Cisse*

### **20.416[] Topics in Biophysics and Physical Biology**

Same subject as 7.74[], 8.590[]

Prereq: None

G (Fall)

2-0-4 units

Provides broad exposure to research in biophysics and physical biology, with emphasis on the critical evaluation of scientific literature. Weekly meetings include in-depth discussion of scientific literature led by distinct faculty on active research topics. Each session also includes brief discussion of non-research topics including effective presentation skills, writing papers and fellowship proposals, choosing scientific and technical research topics, time management, and scientific ethics.

*I. Cisse, N. Fakhri, M. Guo*

### **20.420[] Principles of Molecular Bioengineering**

Same subject as 10.538[]

Prereq: 7.06 and 18.03

G (Fall)

3-0-9 units

Provides an introduction to the mechanistic analysis and engineering of biomolecules and biomolecular systems. Covers methods for measuring, modeling, and manipulating systems, including biophysical experimental tools, computational modeling approaches, and molecular design. Equips students to take systematic and quantitative approaches to the investigation of a wide variety of biological phenomena.

*A. Jasanoff, E. Fraenkel*

**20.430[]] Fields, Forces, and Flows in Biological Systems**

Same subject as 2.795[], 6.561[], 10.539[]

Prereq: Permission of instructor

G (Fall)

3-0-9 units

Molecular diffusion, diffusion-reaction, conduction, convection in biological systems; fields in heterogeneous media; electrical double layers; Maxwell stress tensor, electrical forces in physiological systems. Fluid and solid continua: equations of motion useful for porous, hydrated biological tissues. Case studies of membrane transport, electrode interfaces, electrical, mechanical, and chemical transduction in tissues, convective-diffusion/reaction, electrophoretic, electroosmotic flows in tissues/MEMs, and ECG. Electromechanical and physicochemical interactions in cells and biomaterials; musculoskeletal, cardiovascular, and other biological and clinical examples. Prior undergraduate coursework in transport recommended.

*M. Bathe, A. J. Grodzinsky*

**20.440 Analysis of Biological Networks**

Prereq: Permission of instructor

G (Spring)

6-0-9 units

Conceptual and experimental approaches to analyzing complex biological networks and systems, from molecules to human populations, focusing on human pathophysiology and disease. Moving from single component analysis to pathways and networks, combines didactic lectures with in-depth analysis of current literature and computational analysis. Emphasizes the chemistry and biochemistry of underlying biological processes. Topics include linking genes/SNPs to disease, defining pathways, analysis of pathways *in vivo*, systems-level analysis, and applications of network biology. First half of term focuses on fundamental biological processes and tools/analyses needed by biological engineers, and the second half elaborates on these fundamentals by covering complex biological processes. Students acquire skills in the fundamentals of grant preparation using an NIH format and make an oral presentation.

*P. Blainey, M. Yaffe*

**20.445[]] Methods and Problems in Microbiology**

Same subject as 1.86[], 7.492[]

Prereq: None

G (Fall)

3-0-9 units

See description under subject 7.492[]]. Preference to first-year Microbiology and Biology students.

*M. Laub*

**20.446[]] Microbial Genetics and Evolution**

Same subject as 1.87[], 7.493[], 12.493[]

Prereq: 7.03, 7.05, or permission of instructor

G (Fall)

4-0-8 units

See description under subject 7.493[]].

*A. D. Grossman, O. Cordero*

**20.450 Molecular and Cellular Pathophysiology**

Prereq: (20.420[]] and 20.440) or permission of instructor

Acad Year 2018-2019: G (Fall)

Acad Year 2019-2020: Not offered

4-0-8 units

Compares the complex molecular and cellular interactions in health and disease between commensal microbial communities, pathogens and the human or animal host. Special focus is given to current research on microbe/host interactions, infection of significant importance to public health, and chronic infectious disease. Classwork will include lecture, but emphasize critical evaluation and class discussion of recent scientific papers, and the development of new research agendas in the fields presented.

*J. C. Niles, J. Runstadler*

**20.452[]] Principles of Neuroengineering**

Same subject as 9.422[]], MAS.881[]]

Subject meets with 20.352

Prereq: Permission of instructor

G (Fall)

3-0-9 units

See description under subject MAS.881[]].

*E. S. Boyden, III*

**20.454[]] Revolutionary Ventures: How to Invent and Deploy Transformative Technologies**

Same subject as 9.455[]], 15.128[]], MAS.883[]]

Prereq: Permission of instructor

G (Fall)

2-0-7 units

See description under subject MAS.883[]].

*E. Boyden, J. Bensen, J. Jacobson*

**20.463[]] Biomaterials Science and Engineering**

Same subject as 3.963[]]

Subject meets with 3.055[]], 20.363[]]

Prereq: 3.034, 20.110[]], or permission of instructor

Acad Year 2018-2019: Not offered

Acad Year 2019-2020: G (Fall)

3-0-9 units

Covers, at a molecular scale, the analysis and design of materials used in contact with biological systems, and biomimetic strategies aimed at creating new materials based on principles found in biology. Topics include molecular interaction between bio- and synthetic molecules and surfaces; design, synthesis, and processing approaches for materials that control cell functions; and application of materials science to problems in tissue engineering, drug delivery, vaccines, and cell-guiding surfaces. Students taking graduate version complete additional assignments.

*D. Irvine, K. Ribbeck*

**20.465 Engineering the Immune System in Cancer and Beyond**

Subject meets with 20.365

Prereq: Permission of instructor

G (Spring)

3-0-9 units

Examines strategies in clinical and preclinical development for manipulating the immune system to treat and protect against disease. Begins with brief review of immune system. Discusses interaction of tumors with the immune system, followed by approaches by which the immune system can be modulated to attack cancer. Also covers strategies based in biotechnology, chemistry, materials science, and molecular biology to induce immune responses to treat infection, transplantation, and autoimmunity. Students taking graduate version complete additional assignments.

*D. Irvine*

**20.470[]] Cellular Neurophysiology and Computing**

Same subject as 2.794[]], 6.521[]], 9.021[]], HST.541[]]

Subject meets with 2.791[]], 6.021[]], 9.21[]], 20.370[]]

Prereq: Physics II (GIR), 18.03, and (2.005, 6.002, 6.003, 10.301, 20.110[]], or permission of instructor)

G (Fall)

5-2-5 units

See description under subject 6.521[]].

*J. Han, T. Heldt*

**20.475 Applied Developmental Biology and Tissue Engineering**

Subject meets with 20.375

Prereq: Permission of instructor

Acad Year 2018-2019: Not offered

Acad Year 2019-2020: G (Spring)

3-0-9 units

This subject addresses the integration of engineering and biology design principles to create human tissues and organs for regenerative medicine to drug development. Overview of embryogenesis; how morphogenic phenomena are governed by biochemical and biophysical cues. Analysis of in vitro generation of human brain, gut, and other organoids from stem cells. Roles of biomaterials and microreactors in improving organoid formation and function. Organoid use in modeling disease and physiology in vitro. Engineering and biological principles of reconstructing tissues and organs from postnatal donor cells using biomaterials scaffolds and bioreactors. Select applications such as liver disease, brain disorders, and others. Graduate students will have additional assignments.

*L. Griffith*

**20.486[]] Case Studies and Strategies in Drug Discovery and Development**

Same subject as 7.549[]], 15.137[]], HST.916[]]

Prereq: None

G (Spring)

2-0-4 units

Aims to develop appreciation for the stages of drug discovery and development, from target identification, to the submission of preclinical and clinical data to regulatory authorities for marketing approval. Following introductory lectures on the process of drug development, students working in small teams analyze how one of four new drugs or drug candidates traversed the discovery/development landscape. For each case, an outside expert from the sponsoring drug company or pivotal clinical trial principal investigator provides guidance and critiques the teams' presentations to the class.

*A. W. Wood*

**20.487[]] Optical Microscopy and Spectroscopy for Biology and Medicine**

Same subject as 2.715[]]

Prereq: Permission of instructor

G (Spring)

Not offered regularly; consult department

3-0-9 units

See description under subject 2.715[]].

*P. T. So, C. Sheppard*

**20.490 Foundations of Computational and Systems Biology**

Subject meets with 6.802[], 6.874[], 20.390[], HST.506[]  
 Prereq: (7.05 and (Biology (GIR), 6.0002, or 6.01)) or permission of instructor  
 G (Spring)  
 3-0-9 units

Provides an introduction to computational and systems biology. Includes units on the analysis of protein and nucleic acid sequences, protein structures, and biological networks. Presents principles and methods used for sequence alignment, motif finding, expression array analysis, structural modeling, structure design and prediction, and network analysis and modeling. Techniques include dynamic programming, Markov and hidden Markov models, Bayesian networks, clustering methods, and energy minimization approaches. Exposes students to emerging research areas. Designed for students with strong backgrounds in either molecular biology or computer science. Some foundational material covering basic programming skills, probability and statistics is provided for students with less quantitative backgrounds. Students taking graduate version complete additional assignments.

*D. K. Gifford, T. S. Jaakkola*

**20.507[] Biological Chemistry I**

Same subject as 5.07[]  
 Prereq: 5.12  
 U (Fall)  
 5-0-7 units. REST  
 Credit cannot also be received for 7.05

See description under subject 5.07[].

*E. Nolan*

**20.554[] Frontiers in Chemical Biology**

Same subject as 5.54[], 7.540[]  
 Prereq: 5.07[], 5.13, 7.06, and permission of instructor  
 G (Fall)  
 3-0-9 units

See description under subject 5.54[].

*L. Kiessling, M. Shoulders*

**20.560 Statistics for Biological Engineering**

Prereq: Permission of instructor  
 G (IAP)  
 Not offered regularly; consult department  
 2-0-2 units

Provides basic tools for analyzing experimental data, interpreting statistical reports in the literature, and reasoning under uncertain situations. Topics include probability theory, statistical tests, data exploration, Bayesian statistics, and machine learning. Emphasizes discussion and hands-on learning. Experience with MATLAB, Python, or R recommended.

*S. Olesen*

**20.586[] Science and Business of Biotechnology**

Same subject as 7.546[], 15.480[]  
 Prereq: None. *Coreq: 15.401*; permission of instructor  
 G (Spring)  
 3-0-6 units

See description under subject 15.480[].

*A. Lo, H. Lodish*

**20.630[] Immunology (New)**

Same subject as 7.63[]  
 Subject meets with 7.23[], 20.230[]  
 Prereq: 7.06 and permission of instructor  
 G (Spring)  
 5-0-7 units

See description under subject 7.63[].

*S. Spranger, M. Birnbaum*

**20.902 Independent Study in Biological Engineering**

Prereq: Permission of instructor  
 U (Fall, Spring)  
 Units arranged  
 Can be repeated for credit.

Opportunity for independent study under regular supervision by a faculty member. Projects require prior approval, as well as a substantive paper. Minimum 12 units required.

*Staff*

**20.903 Independent Study in Biological Engineering**

Prereq: Permission of instructor  
 U (Fall, Spring, Summer)  
 Units arranged [P/D/F]  
 Can be repeated for credit.

Opportunity for independent study under regular supervision by a faculty member. Projects require prior approval, as well as a substantive paper. Minimum 6-12 units required.

*Staff*

### 20.920 Practical Work Experience

Prereq: None

U (Fall, IAP, Spring, Summer)

0-1-0 units

For Course 20 students participating in off-campus professional experiences in biological engineering. Before registering for this subject, students must have an offer from a company or organization and must identify a BE supervisor. Upon completion, student must submit a letter from the company or organization describing the experience, along with a substantive final report from the student approved by the MIT supervisor. Subject to departmental approval. Consult departmental undergraduate office.

*Staff*

### 20.930[J] Research Experience in Biopharma

Same subject as 7.930[J]

Prereq: None

G (Fall)

2-10-0 units

Provides exposure to industrial science and develops skills necessary for success in such an environment. Under the guidance of an industrial mentor, students participate in on-site research at a local biopharmaceutical company where they observe and participate in industrial science. Serves as a real-time case study to internalize the factors that shape R&D in industry, including the purpose and scope of a project, key decision points in the past and future, and strategies for execution. Students utilize company resources and work with a scientific team to contribute to the goals of their assigned project; they then present project results to the company and class, emphasizing the logic that dictated their work and their ideas for future directions. Lecture component focuses on professional development.

*S. Clarke*

### 20.950 Research Problems in Biological Engineering

Prereq: Permission of instructor

G (Fall, Spring, Summer)

Units arranged

Can be repeated for credit.

Directed research in the fields of bioengineering and environmental health. Limited to BE students.

*Staff*

### 20.951 Thesis Proposal

Prereq: Permission of instructor

G (Fall, Spring, Summer)

0-24-0 units

Thesis proposal research and presentation to the thesis committee.

*Staff*

### 20.960 Teaching Experience in Biological Engineering

Prereq: Permission of instructor

G (Fall, Spring)

Units arranged

Can be repeated for credit.

For qualified graduate students interested in teaching. Tutorial, laboratory, or classroom teaching under the supervision of a faculty member. Enrollment limited by availability of suitable teaching assignments.

*Staff*

### 20.BME Undergraduate Research in Biomedical Engineering

Prereq: None

U (Fall, Spring)

Units arranged [P/D/F]

Can be repeated for credit.

Individual research project with biomedical or clinical focus, arranged with appropriate faculty member or approved supervisor. Forms and instructions for the proposal and final report are available in the BE Undergraduate Office.

*Consult*

### 20.EPE UPOP Engineering Practice Experience

Engineering School-Wide Elective Subject.

Offered under: 1.EPE, 2.EPE, 3.EPE, 6.EPE, 8.EPE, 10.EPE, 15.EPE, 16.EPE, 20.EPE, 22.EPE

Prereq: 2.EPW or permission of instructor

U (Fall, Spring)

0-0-1 units

See description under subject 2.EPE.

*Staff*

### 20.EPW UPOP Engineering Practice Workshop

Engineering School-Wide Elective Subject.

Offered under: 1.EPW, 2.EPW, 3.EPW, 6.EPW, 10.EPW, 16.EPW, 20.EPW, 22.EPW

Prereq: None

U (Fall, IAP)

1-0-0 units

See description under subject 2.EPW. Enrollment limited.

*Staff*

**20.S900 Special Subject in Biological Engineering**

Prereq: Permission of instructor

U (Fall, Spring)

Units arranged [P/D/F]

Can be repeated for credit.

Detailed discussion of selected topics of current interest. Classwork in various areas not covered by regular subjects.

*L. Griffith, G. McKinley***20.S901 Special Subject in Biological Engineering**

Prereq: None

U (Fall, Spring)

Units arranged [P/D/F]

Can be repeated for credit.

Detailed discussion of selected topics of current interest. Classwork in various areas not covered by regular subjects.

*S. Clarke***20.S940 Special Subject in Biological Engineering**

Prereq: Permission of instructor

U (Fall, IAP, Spring)

Units arranged

Can be repeated for credit.

Detailed discussion of selected topics of current interest. Classwork in various areas not covered by regular subjects.

*Staff***20.S947 Special Subject in Biological Engineering**

Prereq: Permission of instructor

G (Fall, Spring)

Units arranged

Can be repeated for credit.

Detailed discussion of selected topics of current interest. Classwork in various areas not covered by regular subjects.

*Staff***20.S948 Special Subject in Biological Engineering**

Prereq: Permission of instructor

G (Spring)

Units arranged

Can be repeated for credit.

Detailed discussion of selected topics of current interest. Classwork in various areas not covered by regular subjects.

*Staff***20.S949 Special Subject in Biological Engineering**

Prereq: Permission of instructor

G (Fall, Spring)

Units arranged

Can be repeated for credit.

Detailed discussion of selected topics of current interest. Classwork in various areas not covered by regular subjects.

*Staff***20.S952 Special Subject in Biological Engineering**

Prereq: Permission of instructor

G (Fall, Spring)

Units arranged [P/D/F]

Can be repeated for credit.

Detailed discussion of selected topics of current interest. Classwork in various areas not covered by regular subjects.

*Staff***20.THG Graduate Thesis**

Prereq: Permission of instructor

G (Fall, IAP, Spring, Summer)

Units arranged

Can be repeated for credit.

Program of research leading to the writing of an SM or PhD thesis; to be arranged by the student and the MIT faculty advisor.

*Staff***20.THU Undergraduate BE Thesis**

Prereq: None

U (Fall, IAP, Spring)

Units arranged

Can be repeated for credit.

Program of research leading to the writing of an SB thesis; to be arranged by the student under approved supervision.

*Staff***20.UR Undergraduate Research Opportunities**

Prereq: None

U (Fall, IAP, Spring, Summer)

Units arranged [P/D/F]

Can be repeated for credit.

Laboratory research in the fields of bioengineering or environmental health. May be extended over multiple terms.

*S. Manalis*

**20.URG Undergraduate Research Opportunities**

Prereq: None

U (Fall, IAP, Spring, Summer)

Units arranged

Can be repeated for credit.

Emphasizes direct and active involvement in laboratory research in bioengineering or environmental health. May be extended over multiple terms.

*Consult S. Manalis*
