

PHYSICS (COURSE 8)

Undergraduate Subjects

8.01 Physics I

Prereq: None

U (Fall)

3-2-7 units. PHYSICS I

Credit cannot also be received for 8.011, 8.012, 8.01L, ES.801, ES.8012

Introduces classical mechanics. Space and time: straight-line kinematics; motion in a plane; forces and static equilibrium; particle dynamics, with force and conservation of momentum; relative inertial frames and non-inertial force; work, potential energy and conservation of energy; kinetic theory and the ideal gas; rigid bodies and rotational dynamics; vibrational motion; conservation of angular momentum; central force motions; fluid mechanics. Subject taught using the TEAL (Technology-Enabled Active Learning) format which features students working in groups of three, discussing concepts, solving problems, and doing table-top experiments with the aid of computer data acquisition and analysis.

J. Formaggio, P. Dourmashkin

8.011 Physics I

Prereq: None

U (Spring)

5-0-7 units. PHYSICS I

Credit cannot also be received for 8.01, 8.012, 8.01L, ES.801, ES.8012

Introduces classical mechanics. Space and time: straight-line kinematics; motion in a plane; forces and equilibrium; experimental basis of Newton's laws; particle dynamics; universal gravitation; collisions and conservation laws; work and potential energy; vibrational motion; conservative forces; inertial forces and non-inertial frames; central force motions; rigid bodies and rotational dynamics. Designed for students with previous experience in 8.01; the subject is designated as 8.01 on the transcript.

D. Pritchard

8.012 Physics I

Prereq: None

U (Fall)

5-0-7 units. PHYSICS I

Credit cannot also be received for 8.01, 8.011, 8.01L, ES.801, ES.8012

Elementary mechanics, presented in greater depth than in 8.01. Newton's laws, concepts of momentum, energy, angular momentum, rigid body motion, and non-inertial systems. Uses elementary calculus freely; concurrent registration in a math subject more advanced than 18.01 is recommended. In addition to covering the theoretical subject matter, students complete a small experimental project of their own design. Freshmen admitted via AP or Math Diagnostic for Physics Placement results.

M. Soljacic

8.01L Physics I

Prereq: None

U (Fall, IAP)

3-2-7 units. PHYSICS I

Credit cannot also be received for 8.01, 8.011, 8.012, ES.801, ES.8012

Introduction to classical mechanics (see description under 8.01). Includes components of the TEAL (Technology-Enabled Active Learning) format. Material covered over a longer interval so that the subject is completed by the end of the IAP. Substantial emphasis given to reviewing and strengthening necessary mathematics tools, as well as basic physics concepts and problem-solving skills. Content, depth, and difficulty is otherwise identical to that of 8.01. The subject is designated as 8.01 on the transcript.

P. Jarillo-Herrero

8.02 Physics II

Prereq: Calculus I (GIR) and Physics I (GIR)

U (Fall, Spring)

3-2-7 units. PHYSICS II

Credit cannot also be received for 8.021, 8.022, ES.802, ES.8022

Introduction to electromagnetism and electrostatics: electric charge, Coulomb's law, electric structure of matter; conductors and dielectrics. Concepts of electrostatic field and potential, electrostatic energy. Electric currents, magnetic fields and Ampere's law. Magnetic materials. Time-varying fields and Faraday's law of induction. Basic electric circuits. Electromagnetic waves and Maxwell's equations. Subject taught using the TEAL (Technology Enabled Active Learning) studio format which utilizes small group interaction and current technology to help students develop intuition about, and conceptual models of, physical phenomena.

J. Belcher, I. Cisse

8.021 Physics II

Prereq: Calculus I (GIR), Physics I (GIR), and permission of instructor
U (Fall)

5-0-7 units. PHYSICS II

Credit cannot also be received for 8.02, 8.022, ES.802, ES.8022

Introduction to electromagnetism and electrostatics: electric charge, Coulomb's law, electric structure of matter; conductors and dielectrics. Concepts of electrostatic field and potential, electrostatic energy. Electric currents, magnetic fields and Ampere's law. Magnetic materials. Time-varying fields and Faraday's law of induction. Basic electric circuits. Electromagnetic waves and Maxwell's equations. Designed for students with previous experience in 8.02; the subject is designated as 8.02 on the transcript. Enrollment limited.

J. Checkelsky

8.022 Physics II

Prereq: Physics I (GIR); *Coreq: Calculus II (GIR)*

U (Fall, Spring)

5-0-7 units. PHYSICS II

Credit cannot also be received for 8.02, 8.021, ES.802, ES.8022

Parallel to 8.02, but more advanced mathematically. Some knowledge of vector calculus assumed. Maxwell's equations, in both differential and integral form. Electrostatic and magnetic vector potential. Properties of dielectrics and magnetic materials. In addition to the theoretical subject matter, several experiments in electricity and magnetism are performed by the students in the laboratory.

D. Harlow

8.03 Physics III

Prereq: Calculus II (GIR) and Physics II (GIR)

U (Fall, Spring)

5-0-7 units. REST

Mechanical vibrations and waves; simple harmonic motion, superposition, forced vibrations and resonance, coupled oscillations, and normal modes; vibrations of continuous systems; reflection and refraction; phase and group velocity. Optics; wave solutions to Maxwell's equations; polarization; Snell's Law, interference, Huygens's principle, Fraunhofer diffraction, and gratings.

Y-J. Lee, R. Comin

8.033 Relativity

Prereq: Calculus II (GIR) and Physics II (GIR)

U (Fall)

5-0-7 units. REST

Einstein's postulates; consequences for simultaneity, time dilation, length contraction, and clock synchronization; Lorentz transformation; relativistic effects and paradoxes; Minkowski diagrams; invariants and four-vectors; momentum, energy, and mass; particle collisions. Relativity and electricity; Coulomb's law; magnetic fields. Brief introduction to Newtonian cosmology. Introduction to some concepts of general relativity; principle of equivalence. The Schwarzschild metric; gravitational red shift; particle and light trajectories; geodesics; Shapiro delay.

S. Vitale

8.04 Quantum Physics I

Prereq: 8.03 and (18.03 or 18.032)

U (Spring)

5-0-7 units. REST

Credit cannot also be received for 8.041

Experimental basis of quantum physics: photoelectric effect, Compton scattering, photons, Franck-Hertz experiment, the Bohr atom, electron diffraction, deBroglie waves, and wave-particle duality of matter and light. Introduction to wave mechanics: Schrodinger's equation, wave functions, wave packets, probability amplitudes, stationary states, the Heisenberg uncertainty principle, and zero-point energies. Solutions to Schrodinger's equation in one dimension: transmission and reflection at a barrier, barrier penetration, potential wells, the simple harmonic oscillator. Schrodinger's equation in three dimensions: central potentials and introduction to hydrogenic systems.

V. Vuletic

8.041 Quantum Physics I (New)

Prereq: 8.03 and (18.03 or 18.032)

U (Fall)

2-0-10 units. REST

Credit cannot also be received for 8.04

Blended version of 8.04 using a combination of online and in-person instruction. Covers experimental basis of quantum physics: photoelectric effect, Compton scattering, photons, Franck-Hertz experiment, the Bohr atom, electron diffraction, deBroglie waves, and wave-particle duality of matter and light. Introduction to wave mechanics: Schroedinger's equation, wave functions, wave packets, probability amplitudes, stationary states, the Heisenberg uncertainty principle, and zero-point energies. Solutions to Schroedinger's equation in one dimension: transmission and reflection at a barrier, barrier penetration, potential wells, the simple harmonic oscillator. Schroedinger's equation in three dimensions: central potentials and introduction to hydrogenic systems.

*V. Vuletic***8.044 Statistical Physics I**

Prereq: 8.03 and 18.03

U (Spring)

5-0-7 units

Introduction to probability, statistical mechanics, and thermodynamics. Random variables, joint and conditional probability densities, and functions of a random variable. Concepts of macroscopic variables and thermodynamic equilibrium, fundamental assumption of statistical mechanics, microcanonical and canonical ensembles. First, second, and third laws of thermodynamics. Numerous examples illustrating a wide variety of physical phenomena such as magnetism, polyatomic gases, thermal radiation, electrons in solids, and noise in electronic devices. Concurrent enrollment in 8.04 is recommended.

*N. Fakhri***8.05 Quantum Physics II**

Prereq: 8.04

U (Fall)

5-0-7 units

Credit cannot also be received for 8.051

Together 8.05 and 8.06 cover quantum physics with applications drawn from modern physics. General formalism of quantum mechanics: states, operators, Dirac notation, representations, measurement theory. Harmonic oscillator: operator algebra, states. Quantum mechanics in three dimensions: central potentials and the radial equation, bound and scattering states, qualitative analysis of wavefunctions. Angular momentum: operators, commutator algebra, eigenvalues and eigenstates, spherical harmonics. Spin: Stern-Gerlach devices and measurements, nuclear magnetic resonance, spin and statistics. Addition of angular momentum: Clebsch-Gordan series and coefficients, spin systems, and allotropic forms of hydrogen.

*W. Detmold***8.051 Quantum Physics II**

Prereq: 8.04 and permission of instructor

U (Spring)

2-0-10 units

Credit cannot also be received for 8.05

Blended version of 8.05 using a combination of online and in-person instruction. Together with 8.06 covers quantum physics with applications drawn from modern physics. General formalism of quantum mechanics: states, operators, Dirac notation, representations, measurement theory. Harmonic oscillator: operator algebra, states. Quantum mechanics in three dimensions: central potentials and the radial equation, bound and scattering states, qualitative analysis of wave functions. Angular momentum: operators, commutator algebra, eigenvalues and eigenstates, spherical harmonics. Spin: Stern-Gerlach devices and measurements, nuclear magnetic resonance, spin and statistics. Addition of angular momentum: Clebsch-Gordan series and coefficients, spin systems, and allotropic forms of hydrogen. Limited to 20.

*Fall: Staff**Spring: W. Detmold*

8.06 Quantum Physics III

Prereq: 8.05

U (Spring)

5-0-7 units

Continuation of 8.05. Units: natural units, scales of microscopic phenomena, applications. Time-independent approximation methods: degenerate and nondegenerate perturbation theory, variational method, Born-Oppenheimer approximation, applications to atomic and molecular systems. The structure of one- and two-electron atoms: overview, spin-orbit and relativistic corrections, fine structure, variational approximation, screening, Zeeman and Stark effects. Charged particles in a magnetic field: Landau levels and integer quantum hall effect. Scattering: general principles, partial waves, review of one-dimension, low-energy approximations, resonance, Born approximation. Time-dependent perturbation theory. Students research and write a paper on a topic related to the content of 8.05 and 8.06.

*B. Zwiebach***8.07 Electromagnetism II**

Prereq: 8.03 and 18.03

U (Fall)

4-0-8 units

Survey of basic electromagnetic phenomena: electrostatics, magnetostatics; electromagnetic properties of matter. Time-dependent electromagnetic fields and Maxwell's equations. Electromagnetic waves, emission, absorption, and scattering of radiation. Relativistic electrodynamics and mechanics.

*A. Guth***8.08 Statistical Physics II**

Prereq: 8.044 and 8.05

U (Spring)

4-0-8 units

Probability distributions for classical and quantum systems. Microcanonical, canonical, and grand canonical partition-functions and associated thermodynamic potentials. Conditions of thermodynamic equilibrium for homogenous and heterogenous systems. Applications: non-interacting Bose and Fermi gases; mean field theories for real gases, binary mixtures, magnetic systems, polymer solutions; phase and reaction equilibria, critical phenomena. Fluctuations, correlation functions and susceptibilities, and Kubo formulae. Evolution of distribution functions: Boltzmann and Smoluchowski equations.

*Fall: Staff**Spring: L. Fu***8.09 Classical Mechanics III**

Subject meets with 8.309

Prereq: 8.223

U (Fall)

4-0-8 units

Covers Lagrangian and Hamiltonian mechanics, systems with constraints, rigid body dynamics, vibrations, central forces, Hamilton-Jacobi theory, action-angle variables, perturbation theory, and continuous systems. Provides an introduction to ideal and viscous fluid mechanics, including turbulence, as well as an introduction to nonlinear dynamics, including chaos. Students taking graduate version complete different assignments.

*I. Stewart***Undergraduate Laboratory and Special Project Subjects****8.10 Exploring and Communicating Physics (and other) Frontiers**

Prereq: None

U (Fall)

2-0-0 units

Features a series of 12 interactive sessions that span a wide variety of topics at the frontiers of science - e.g., quantum computing, dark matter, the nature of time - and encourage independent thinking. Discussions draw from the professor's published pieces in periodicals as well as short excerpts from his books. Also discusses, through case studies, the process of writing and re-writing. Subject can count toward the 6-unit discovery-focused credit limit for first year students.

*F. Wilczek***8.13 Experimental Physics I**

Prereq: 8.04

U (Fall, Spring)

0-6-12 units. Institute LAB

Four fundamental laboratory experiments are carried out each term, covering most aspects of modern physics relating to names such as Rutherford, Franck-Hertz, Hall, Ramsauer, Doppler, Fraunhofer, Faraday, Mossbauer, Compton, and Stern-Gerlach. Stresses basic experimental techniques and data analysis, and written and oral presentation of experiment results.

J. Conrad, J. Formaggio, A. Levine, K. Perez

8.14 Experimental Physics II

Prereq: 8.05 and 8.13

U (Spring)

0-6-12 units

Four fundamental laboratory experiments are carried out each term, covering most aspects of modern physics relating to names such as Rutherford, Franck-Hertz, Hall, Ramsauer, Doppler, Fraunhofer, Faraday, Mossbauer, Compton, and Stern-Gerlach. Stresses basic experimental techniques and data analysis, and written and oral presentation of experiment results. 8.14 requires knowledge of quantum mechanics at the 8.05 level.

*G. Roland***8.18 Research Problems in Undergraduate Physics**

Prereq: Permission of instructor

U (Fall, IAP, Spring, Summer)

Units arranged [P/D/F]

Can be repeated for credit.

Opportunity for undergraduates to engage in experimental or theoretical research under the supervision of a staff member. Specific approval required in each case.

*Consult N. Mavalvala***8.19 Readings in Physics**

Prereq: None

U (Fall, IAP, Spring, Summer)

Units arranged [P/D/F]

Can be repeated for credit.

Supervised reading and library work. Choice of material and allotment of time according to individual needs. For students who want to do work not provided for in the regular subjects. Specific approval required in each case.

*Consult N. Mavalvala***Undergraduate Elective Subjects****8.20 Introduction to Special Relativity**

Prereq: Calculus I (GIR) and Physics I (GIR)

U (IAP)

2-0-7 units. REST

Introduces the basic ideas and equations of Einstein's special theory of relativity. Topics include Lorentz transformations, length contraction and time dilation, four vectors, Lorentz invariants, relativistic energy and momentum, relativistic kinematics, Doppler shift, space-time diagrams, relativity paradoxes, and some concepts of general relativity. Intended for freshmen and sophomores. Not usable as a restricted elective by Physics majors. Credit cannot be received for 8.20 if credit for 8.033 is or has been received in the same or prior terms.

*S. Vitale***8.21 Physics of Energy**

Prereq: Calculus II (GIR), Chemistry (GIR), and Physics II (GIR)

U (Spring)

5-0-7 units. REST

A comprehensive introduction to the fundamental physics of energy systems that emphasizes quantitative analysis. Focuses on the fundamental physical principles underlying energy processes and on the application of these principles to practical calculations. Applies mechanics and electromagnetism to energy systems; introduces and applies basic ideas from thermodynamics, quantum mechanics, and nuclear physics. Examines energy sources, conversion, transport, losses, storage, conservation, and end uses. Analyzes the physics of side effects, such as global warming and radiation hazards. Provides students with technical tools and perspective to evaluate energy choices quantitatively at both national policy and personal levels.

*R. Jaffe***8.223 Classical Mechanics II**

Prereq: Calculus II (GIR) and Physics I (GIR)

U (IAP)

2-0-4 units

A broad, theoretical treatment of classical mechanics, useful in its own right for treating complex dynamical problems, but essential to understanding the foundations of quantum mechanics and statistical physics. Generalized coordinates, Lagrangian and Hamiltonian formulations, canonical transformations, and Poisson brackets. Applications to continuous media. The relativistic Lagrangian and Maxwell's equations.

Staff, M. Evans

8.224 Exploring Black Holes: General Relativity and Astrophysics

Prereq: 8.033 or 8.20

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: U (Fall)

3-0-9 units

Study of physical effects in the vicinity of a black hole as a basis for understanding general relativity, astrophysics, and elements of cosmology. Extension to current developments in theory and observation. Energy and momentum in flat space-time; the metric; curvature of space-time near rotating and nonrotating centers of attraction; trajectories and orbits of particles and light; elementary models of the Cosmos. Weekly meetings include an evening seminar and recitation. The last third of the term is reserved for collaborative research projects on topics such as the Global Positioning System, solar system tests of relativity, descending into a black hole, gravitational lensing, gravitational waves, Gravity Probe B, and more advanced models of the cosmos. Subject has online components that are open to selected MIT alumni. Alumni wishing to participate should contact Professor Bertschinger at edbert@mit.edu. Limited to 40.

*E. Bertschinger***8.225[J] Einstein, Oppenheimer, Feynman: Physics in the 20th Century**

Same subject as STS.042[J]

Prereq: None

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: U (Fall)

3-0-9 units. HASS-H

See description under subject STS.042[J]. Enrollment limited.

*D. I. Kaiser***8.226 Forty-three Orders of Magnitude**

Prereq: (8.04 and 8.044) or permission of instructor

Acad Year 2021-2022: U (Spring)

Acad Year 2022-2023: Not offered

3-0-9 units

Examines the widespread societal implications of current scientific discoveries in physics across forty-three orders of magnitude in length scale. Addresses topics ranging from climate change to nuclear nonproliferation. Students develop their ability to express concepts at a level accessible to the public and to present a well-reasoned argument on a topic that is a part of the national debate. Requires diverse writing assignments, including substantial papers. Enrollment limited.

*J. Conrad***8.231 Physics of Solids I**

Prereq: 8.044; Coreq: 8.05

U (Fall)

4-0-8 units

Introduction to the basic concepts of the quantum theory of solids. Topics: periodic structure and symmetry of crystals; diffraction; reciprocal lattice; chemical bonding; lattice dynamics, phonons, thermal properties; free electron gas; model of metals; Bloch theorem and band structure, nearly free electron approximation; tight binding method; Fermi surface; semiconductors, electrons, holes, impurities; optical properties, excitons; and magnetism.

*S. Todadri***8.241 Introduction to Biological Physics**

Prereq: Physics II (GIR) and (5.60 or 8.044)

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: U (Spring)

4-0-8 units

Credit cannot also be received for 20.315, 20.415

Introduces the main concepts of biological physics, with a focus on biophysical phenomena at the molecular and cellular scales. Presents the role of entropy and diffusive transport in living matter; challenges to life resulting from the highly viscous environment present at microscopic scales, including constraints on force, motion and transport within cells, tissues, and fluids; principles of how cellular machinery (e.g., molecular motors) can convert electro-chemical energy sources to mechanical forces and motion. Also covers polymer physics relevant to DNA and other biological polymers, including the study of configurations, fluctuations, rigidity, and entropic elasticity. 20.315 and 20.415 meet with 8.241 when offered concurrently.

*I. Cisse***8.245[J] Viruses, Pandemics, and Immunity**

Same subject as 5.003[J], 10.382[J], HST.439[J]

Subject meets with 5.002[J], 10.380[J], HST.438[J]

Prereq: None

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: U (Spring)

2-0-1 units

See description under subject HST.439[J]. HST.438[J] intended for first-year students; all others should take HST.439[J].

A. Chakraborty

8.251 String Theory for Undergraduates

Prereq: 8.033, 8.044, and 8.05

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: U (Spring)

4-0-8 units

Credit cannot also be received for 8.821

Introduction to the main concepts of string theory, i.e., quantum mechanics of a relativistic string. Develops aspects of string theory and makes it accessible to students familiar with basic electromagnetism and statistical mechanics, including the study of D-branes and string thermodynamics. Meets with 8.821 when offered concurrently.

*H. Liu***8.276 Nuclear and Particle Physics**

Prereq: 8.033 and 8.04

U (Spring)

Not offered regularly; consult department

4-0-8 units

Presents a modern view of the fundamental structure of matter. Starting from the Standard Model, which views leptons and quarks as basic building blocks of matter, establishes the properties and interactions of these particles. Explores applications of this phenomenology to both particle and nuclear physics. Emphasizes current topics in nuclear and particle physics research at MIT. Intended for students with a basic knowledge of relativity and quantum physics concepts.

*M. Williams***8.277 Introduction to Particle Accelerators**

Prereq: (6.013 or 8.07) and permission of instructor

U (Fall, IAP, Spring)

Not offered regularly; consult department

Units arranged

Can be repeated for credit.

Principles of acceleration: beam properties; linear accelerators, synchrotrons, and storage rings. Accelerator technologies: radio frequency cavities, bending and focusing magnets, beam diagnostics. Particle beam optics and dynamics. Special topics: measures of accelerators performance in science, medicine and industry; synchrotron radiation sources; free electron lasers; high-energy colliders; and accelerators for radiation therapy. May be repeated for credit for a maximum of 12 units.

*W. Barletta***8.282[J] Introduction to Astronomy**

Same subject as 12.402[J]

Prereq: Physics I (GIR)

U (Spring)

3-0-6 units. REST

Quantitative introduction to the physics of planets, stars, galaxies and our universe, from origin to ultimate fate, with emphasis on the physics tools and observational techniques that enable our understanding. Topics include our solar system, extrasolar planets; our Sun and other "normal" stars, star formation, evolution and death, supernovae, compact objects (white dwarfs, neutron stars, pulsars, stellar-mass black holes); galactic structure, star clusters, interstellar medium, dark matter; other galaxies, quasars, supermassive black holes, gravitational waves; cosmic large-scale structure, origin, evolution and fate of our universe, inflation, dark energy, cosmic microwave background radiation, gravitational lensing, 21cm tomography. Not usable as a restricted elective by Physics majors.

*M. Tegmark***8.284 Modern Astrophysics**

Prereq: 8.04; Coreq: 8.05

U (Spring)

3-0-9 units

Applications of physics (Newtonian, statistical, and quantum mechanics) to fundamental processes that occur in celestial objects. Includes main-sequence stars, collapsed stars (white dwarfs, neutron stars, and black holes), pulsars, supernovae, the interstellar medium, galaxies, and as time permits, active galaxies, quasars, and cosmology. Observational data discussed. No prior knowledge of astronomy is required.

*N. Weinberg***8.286 The Early Universe**

Prereq: Physics II (GIR) and 18.03

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: U (Fall)

3-0-9 units. REST

Introduction to modern cosmology. First half deals with the development of the big bang theory from 1915 to 1980, and latter half with recent impact of particle theory. Topics: special relativity and the Doppler effect, Newtonian cosmological models, introduction to non-Euclidean spaces, thermal radiation and early history of the universe, big bang nucleosynthesis, introduction to grand unified theories and other recent developments in particle theory, baryogenesis, the inflationary universe model, and the evolution of galactic structure.

A. Guth

8.287[*J*] Observational Techniques of Optical Astronomy

Same subject as 12.410[*J*]

Prereq: 8.282[*J*], 12.409, or other introductory astronomy course
U (Fall)

3-4-8 units. Institute LAB

See description under subject 12.410[*J*]. Limited to 18; preference to Course 8 and Course 12 majors and minors.

R. Binzel, A. Bosh

8.290[*J*] Extrasolar Planets: Physics and Detection Techniques

Same subject as 12.425[*J*]

Subject meets with 12.625

Prereq: 8.03 and 18.03

U (Fall)

3-0-9 units. REST

See description under subject 12.425[*J*].

S. Seager

8.292[*J*] Fluid Physics

Same subject as 12.330[*J*]

Prereq: 5.60, 8.044, or permission of instructor

U (Spring)

Not offered regularly; consult department

3-0-9 units

A physics-based introduction to the properties of fluids and fluid systems, with examples drawn from a broad range of sciences, including atmospheric physics and astrophysics. Definitions of fluids and the notion of continuum. Equations of state and continuity, hydrostatics and conservation of momentum; ideal fluids and Euler's equation; viscosity and the Navier-Stokes equation. Energy considerations, fluid thermodynamics, and isentropic flow. Compressible versus incompressible and rotational versus irrotational flow; Bernoulli's theorem; steady flow, streamlines and potential flow. Circulation and vorticity. Kelvin's theorem. Boundary layers. Fluid waves and instabilities. Quantum fluids.

Staff

8.295 Practical Experience in Physics

Prereq: None

U (Fall, IAP, Spring, Summer)

0-1-0 units

Can be repeated for credit.

For Course 8 students participating in off-campus experiences in physics. Before registering for this subject, students must have an internship offer from a company or organization and must identify a Physics supervisor. Upon completion of the project, student must submit a letter from the company or organization describing the work accomplished, along with a substantive final report from the student approved by the MIT supervisor. Subject to departmental approval. Consult departmental academic office.

Consult N. Mavalvala

8.298 Selected Topics in Physics

Prereq: Permission of instructor

U (Fall, IAP, Spring, Summer)

Units arranged

Can be repeated for credit.

Presentation of topics of current interest, with content varying from year to year.

Consult I. Stewart

8.299 Physics Teaching

Prereq: None

U (Fall, Spring)

Units arranged [P/D/F]

Can be repeated for credit.

For qualified undergraduate students interested in gaining some experience in teaching. Laboratory, tutorial, or classroom teaching under the supervision of a faculty member. Students selected by interview.

Consult N. Mavalvala

8.EPE UPOP Engineering Practice Experience

Engineering School-Wide Elective Subject.

Offered under: 1.EPE, 2.EPE, 3.EPE, 6.EPE, 8.EPE, 10.EPE, 15.EPE, 16.EPE, 20.EPE, 22.EPE

Prereq: 2.EPW or permission of instructor

U (Fall, Spring)

0-0-1 units

See description under subject 2.EPE.

Staff

8.S10 Special Subject: Physics

Prereq: None

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: U (Spring)

Units arranged

Can be repeated for credit.

Opportunity for group study of subjects in physics not otherwise included in the curriculum.

A. Adams, K. Ellenbogen

8.S227 Special Subject: Physics

Prereq: None

U (Spring)

3-0-9 units

Opportunity for group study of subjects in physics not otherwise included in the curriculum.

R. Price

8.S30 Special Subject: Physics

Prereq: None

U (IAP)

Not offered regularly; consult department

Opportunity for group study of subjects in physics not otherwise included in the curriculum.

A. Bernstein, J. Walsh

8.S50 Special Subject: Physics

Prereq: None

U (IAP)

Units arranged [P/D/F]

Can be repeated for credit.

Opportunity for group study of subjects in physics not otherwise included in the curriculum.

E. Bertschinger

8.UR Undergraduate Research

Prereq: None

U (Fall, IAP, Spring, Summer)

Units arranged [P/D/F]

Can be repeated for credit.

Research opportunities in physics. For further information, contact the departmental UROP coordinator.

N. Mavalvala

8.THU Undergraduate Physics Thesis

Prereq: None

U (Fall, IAP, Spring, Summer)

Units arranged

Can be repeated for credit.

Program of research leading to the writing of an S.B. thesis; to be arranged by the student under approved supervision.

Information: N. Mavalvala

Graduate Subjects**8.309 Classical Mechanics III**

Subject meets with 8.09

Prereq: None

G (Fall)

4-0-8 units

Covers Lagrangian and Hamiltonian mechanics, systems with constraints, rigid body dynamics, vibrations, central forces, Hamilton-Jacobi theory, action-angle variables, perturbation theory, and continuous systems. Provides an introduction to ideal and viscous fluid mechanics, including turbulence, as well as an introduction to nonlinear dynamics, including chaos. Students taking graduate version complete different assignments.

I. Stewart

8.311 Electromagnetic Theory I

Prereq: 8.07

G (Spring)

4-0-8 units

Basic principles of electromagnetism: experimental basis, electrostatics, magnetic fields of steady currents, motional emf and electromagnetic induction, Maxwell's equations, propagation and radiation of electromagnetic waves, electric and magnetic properties of matter, and conservation laws. Subject uses appropriate mathematics but emphasizes physical phenomena and principles.

J. Belcher

8.315[JJ] Mathematical Methods in Nanophotonics

Same subject as 18.369[JJ]

Prereq: 8.07, 18.303, or permission of instructor

Acad Year 2021-2022: G (Fall)

Acad Year 2022-2023: Not offered

3-0-9 units

See description under subject 18.369[JJ].

S. G. Johnson

8.321 Quantum Theory I

Prereq: 8.05

G (Fall)

4-0-8 units

A two-term subject on quantum theory, stressing principles: uncertainty relation, observables, eigenstates, eigenvalues, probabilities of the results of measurement, transformation theory, equations of motion, and constants of motion. Symmetry in quantum mechanics, representations of symmetry groups. Variational and perturbation approximations. Systems of identical particles and applications. Time-dependent perturbation theory. Scattering theory: phase shifts, Born approximation. The quantum theory of radiation. Second quantization and many-body theory. Relativistic quantum mechanics of one electron.

*H. Liu***8.322 Quantum Theory II**

Prereq: 8.07 and 8.321

Acad Year 2021-2022: G (Spring)

Acad Year 2022-2023: Not offered

4-0-8 units

A two-term subject on quantum theory, stressing principles: uncertainty relation, observables, eigenstates, eigenvalues, probabilities of the results of measurement, transformation theory, equations of motion, and constants of motion. Symmetry in quantum mechanics, representations of symmetry groups. Variational and perturbation approximations. Systems of identical particles and applications. Time-dependent perturbation theory. Scattering theory: phase shifts, Born approximation. The quantum theory of radiation. Second quantization and many-body theory. Relativistic quantum mechanics of one electron.

*S. Todadri***8.323 Relativistic Quantum Field Theory I**

Prereq: 8.321

G (Spring)

4-0-8 units

A one-term self-contained subject in quantum field theory. Concepts and basic techniques are developed through applications in elementary particle physics, and condensed matter physics. Topics: classical field theory, symmetries, and Noether's theorem. Quantization of scalar fields, spin fields, and Gauge bosons. Feynman graphs, analytic properties of amplitudes and unitarity of the S-matrix. Calculations in quantum electrodynamics (QED). Introduction to renormalization.

*T. Slatyer***8.324 Relativistic Quantum Field Theory II**

Prereq: 8.322 and 8.323

G (Fall)

4-0-8 units

The second term of the quantum field theory sequence. Develops in depth some of the topics discussed in 8.323 and introduces some advanced material. Topics: perturbation theory and Feynman diagrams, scattering theory, Quantum Electrodynamics, one loop renormalization, quantization of non-abelian gauge theories, the Standard Model of particle physics, other topics.

*T. Slatyer***8.325 Relativistic Quantum Field Theory III**

Prereq: 8.324

G (Spring)

4-0-8 units

The third and last term of the quantum field theory sequence. Its aim is the proper theoretical discussion of the physics of the standard model. Topics: quantum chromodynamics; Higgs phenomenon and a description of the standard model; deep-inelastic scattering and structure functions; basics of lattice gauge theory; operator products and effective theories; detailed structure of the standard model; spontaneously broken gauge theory and its quantization; instantons and theta-vacua; topological defects; introduction to supersymmetry.

*W. Taylor***8.333 Statistical Mechanics I**

Prereq: 8.044 and 8.05

G (Fall)

4-0-8 units

First part of a two-subject sequence on statistical mechanics. Examines the laws of thermodynamics and the concepts of temperature, work, heat, and entropy. Postulates of classical statistical mechanics, microcanonical, canonical, and grand canonical distributions; applications to lattice vibrations, ideal gas, photon gas. Quantum statistical mechanics; Fermi and Bose systems. Interacting systems: cluster expansions, van der Waal's gas, and mean-field theory.

M. Kardar

8.334 Statistical Mechanics II

Prereq: 8.333

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: G (Spring)

4-0-8 units

Second part of a two-subject sequence on statistical mechanics. Explores topics from modern statistical mechanics: the hydrodynamic limit and classical field theories. Phase transitions and broken symmetries: universality, correlation functions, and scaling theory. The renormalization approach to collective phenomena. Dynamic critical behavior. Random systems.

*Staff***8.351[J] Classical Mechanics: A Computational Approach**

Same subject as 6.946[J], 12.620[J]

Prereq: Physics I (GIR), 18.03, and permission of instructor

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: G (Fall)

3-3-6 units

See description under subject 12.620[J].

*J. Wisdom, G. J. Sussman***8.361 Quantum Theory of Many-Particle Systems**

Prereq: 8.322 and 8.333

G (Fall)

Not offered regularly; consult department

3-0-9 units

Introduces general many-body theory applicable to low temperature, nuclear, and solid-state physics. Reviews occupation number representation and classical Mayer expansion. Perturbation theory: diagrammatic expansions and linked-cluster theorem for zero or finite temperature systems of fermions or bosons. Green's functions: analytic properties, equations of motion, relation to observables, approximations, linear response theory, and random phase approximation. Superconductivity: electron-phonon interaction, instability of normal state, BCS ground state, perturbation theory.

*Staff***8.370[J] Quantum Computation**

Same subject as 2.111[J], 18.435[J]

Prereq: 8.05, 18.06, 18.061, 18.700, or 18.701

G (Fall)

3-0-9 units

See description under subject 18.435[J].

*I. Chuang, A. Harrow, S. Lloyd, P. Shor***8.371[J] Quantum Information Science**

Same subject as 6.443[J], 18.436[J]

Prereq: 18.435[J]

G (Spring)

3-0-9 units

Examines quantum computation and quantum information. Topics include quantum circuits, the quantum Fourier transform and search algorithms, the quantum operations formalism, quantum error correction, Calderbank-Shor-Steane and stabilizer codes, fault tolerant quantum computation, quantum data compression, quantum entanglement, capacity of quantum channels, and quantum cryptography and the proof of its security. Prior knowledge of quantum mechanics required.

*I. Chuang, A. Harrow***8.381, 8.382 Selected Topics in Theoretical Physics**

Prereq: Permission of instructor

G (Fall, Spring)

Not offered regularly; consult department

3-0-9 units

Topics of current interest in theoretical physics, varying from year to year. Subject not routinely offered; given when sufficient interest is indicated.

*Staff***8.391 Pre-Thesis Research**

Prereq: Permission of instructor

G (Fall)

Units arranged [P/D/F]

Can be repeated for credit.

Advanced problems in any area of experimental or theoretical physics, with assigned reading and consultations.

*Staff***8.392 Pre-Thesis Research**

Prereq: Permission of instructor

G (Spring, Summer)

Units arranged [P/D/F]

Can be repeated for credit.

Advanced problems in any area of experimental or theoretical physics, with assigned reading and consultations.

Staff

8.395[J] Teaching College-Level Science and Engineering

Same subject as 1.95[J], 5.95[J], 7.59[J], 18.094[J]

Subject meets with 2.978

Prereq: None

G (Fall)

2-0-2 units

See description under subject 5.95[J].

J. Rankin

8.398 Selected Topics in Graduate Physics

Prereq: None

G (Fall, Spring)

Units arranged

Can be repeated for credit.

A seminar for first-year PhD students presenting topics of current interest, with content varying from year to year. Open only to first-year graduate students in Physics.

Consult J. Thaler

8.399 Physics Teaching

Prereq: Permission of instructor

G (Fall, Spring)

Units arranged [P/D/F]

Can be repeated for credit.

For qualified graduate students interested in gaining some experience in teaching. Laboratory, tutorial, or classroom teaching under the supervision of a faculty member. Students selected by interview.

Consult C. Paus

Physics of Atoms, Radiation, Solids, Fluids, and Plasmas**8.421 Atomic and Optical Physics I**

Prereq: 8.05

Acad Year 2021-2022: G (Spring)

Acad Year 2022-2023: Not offered

3-0-9 units

The first of a two-term subject sequence that provides the foundations for contemporary research in selected areas of atomic and optical physics. The interaction of radiation with atoms: resonance; absorption, stimulated and spontaneous emission; methods of resonance, dressed atom formalism, masers and lasers, cavity quantum electrodynamics; structure of simple atoms, behavior in very strong fields; fundamental tests: time reversal, parity violations, Bell's inequalities; and experimental methods.

M. Zwiernin

8.422 Atomic and Optical Physics II

Prereq: 8.05

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: G (Spring)

3-0-9 units

The second of a two-term subject sequence that provides the foundations for contemporary research in selected areas of atomic and optical physics. Non-classical states of light- squeezed states; multi-photon processes, Raman scattering; coherence- level crossings, quantum beats, double resonance, superradiance; trapping and cooling- light forces, laser cooling, atom optics, spectroscopy of trapped atoms and ions; atomic interactions- classical collisions, quantum scattering theory, ultracold collisions; and experimental methods.

Staff

8.431[J] Nonlinear Optics

Same subject as 6.634[J]

Prereq: 6.013 or 8.07

G (Spring)

3-0-9 units

See description under subject 6.634[J].

J. G. Fujimoto

8.481, 8.482 Selected Topics in Physics of Atoms and Radiation

Prereq: 8.321

G (Fall, Spring)

Not offered regularly; consult department

3-0-9 units

Presentation of topics of current interest, with content varying from year to year. Subject not routinely offered; given when sufficient interest is indicated.

Staff

8.511 Theory of Solids I

Prereq: 8.231

G (Fall)

3-0-9 units

First term of a theoretical treatment of the physics of solids. Concept of elementary excitations. Symmetry- translational, rotational, and time-reversal invariances- theory of representations. Energy bands- electrons and phonons. Topological band theory. Survey of electronic structure of metals, semimetals, semiconductors, and insulators, excitons, critical points, response functions, and interactions in the electron gas. Theory of superconductivity.

L. Levitov

8.512 Theory of Solids II

Prereq: 8.511

G (Spring)

3-0-9 units

Second term of a theoretical treatment of the physics of solids. Interacting electron gas: many-body formulation, Feynman diagrams, random phase approximation and beyond. General theory of linear response: dielectric function; sum rules; plasmons; optical properties; applications to semiconductors, metals, and insulators. Transport properties: non-interacting electron gas with impurities, diffusons. Quantum Hall effect: integral and fractional. Electron-phonon interaction: general theory, applications to metals, semiconductors and insulators, polarons, and field-theory description. Superconductivity: experimental observations, phenomenological theories, and BCS theory.

*L. Levitov***8.513 Many-Body Theory for Condensed Matter Systems**

Prereq: 8.033, 8.05, 8.08, and 8.231

Acad Year 2021-2022: G (Fall)

Acad Year 2022-2023: Not offered

3-0-9 units

Concepts and physical pictures behind various phenomena that appear in interacting many-body systems. Visualization occurs through concentration on path integral, mean-field theories and semiclassical picture of fluctuations around mean-field state. Topics covered: interacting boson/fermion systems, Fermi liquid theory and bosonization, symmetry breaking and nonlinear sigma-model, quantum gauge theory, quantum Hall theory, mean-field theory of spin liquids and quantum order, string-net condensation and emergence of light and fermions.

*X-G. Wen***8.514 Strongly Correlated Systems in Condensed Matter Physics**

Prereq: 8.322 and 8.333

Acad Year 2021-2022: G (Spring)

Acad Year 2022-2023: Not offered

3-0-9 units

Study of condensed matter systems where interactions between electrons play an important role. Topics vary depending on lecturer but may include low-dimension magnetic and electronic systems, disorder and quantum transport, magnetic impurities (the Kondo problem), quantum spin systems, the Hubbard model and high-temperature superconductors. Topics are chosen to illustrate the application of diagrammatic techniques, field-theory approaches, and renormalization group methods in condensed matter physics.

*S. Todadri***8.581, 8.582 Selected Topics in Condensed Matter Physics**

Prereq: Permission of instructor

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: G (Spring)

3-0-9 units

Can be repeated for credit.

Presentation of topics of current interest, with contents varying from year to year. Subject not routinely offered; given when sufficient interest is indicated.

*Staff***8.590[J] Topics in Biophysics and Physical Biology**

Same subject as 7.74[J], 20.416[J]

Prereq: None

G (Fall)

See description under subject 20.416[J].

*I. Cisse, N. Fakhri, M. Guo***8.591[J] Systems Biology**

Same subject as 7.81[J]

Subject meets with 7.32

Prereq: (18.03 and 18.05) or permission of instructor

G (Fall)

3-0-9 units

Introduction to cellular and population-level systems biology with an emphasis on synthetic biology, modeling of genetic networks, cell-cell interactions, and evolutionary dynamics. Cellular systems include genetic switches and oscillators, network motifs, genetic network evolution, and cellular decision-making. Population-level systems include models of pattern formation, cell-cell communication, and evolutionary systems biology. Students taking graduate version explore the subject in more depth.

J. Gore

8.592[J] Statistical Physics in Biology

Same subject as HST.452[J]

Prereq: 8.333 or permission of instructor

Acad Year 2021-2022: G (Spring)

Acad Year 2022-2023: Not offered

3-0-9 units

A survey of problems at the interface of statistical physics and modern biology: bioinformatic methods for extracting information content of DNA; gene finding, sequence comparison, phylogenetic trees. Physical interactions responsible for structure of biopolymers; DNA double helix, secondary structure of RNA, elements of protein folding. Considerations of force, motion, and packaging; protein motors, membranes. Collective behavior of biological elements; cellular networks, neural networks, and evolution.

*M. Kardar, L. Mirny***8.593[J] Biological Physics**

Same subject as HST.450[J]

Prereq: 8.044 recommended but not necessary

G (Spring)

Not offered regularly; consult department

4-0-8 units

Designed to provide seniors and first-year graduate students with a quantitative, analytical understanding of selected biological phenomena. Topics include experimental and theoretical basis for the phase boundaries and equation of state of concentrated protein solutions, with application to diseases such as sickle cell anemia and cataract. Protein-ligand binding and linkage and the theory of allosteric regulation of protein function, with application to proteins as stores as transporters in respiration, enzymes in metabolic pathways, membrane receptors, regulators of gene expression, and self-assembling scaffolds. The physics of locomotion and chemoreception in bacteria and the biophysics of vision, including the theory of transparency of the eye, molecular basis of photo reception, and the detection of light as a signal-to-noise discrimination.

*G. Benedek***8.613[J] Introduction to Plasma Physics I**

Same subject as 22.611[J]

Prereq: (6.013 or 8.07) and (18.04 or *Coreq: 18.075*)

G (Fall)

3-0-9 units

See description under subject 22.611[J].

3-0-9 units

See description under subject 22.612[J].

*N. Loureiro***8.624 Plasma Waves**

Prereq: 22.611[J]

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: G (Spring)

3-0-9 units

Comprehensive theory of electromagnetic waves in a magnetized plasma. Wave propagation in cold and hot plasmas. Energy flow. Absorption by Landau and cyclotron damping and by transit time magnetic pumping (TTMP). Wave propagation in inhomogeneous plasma: accessibility, WKB theory, mode conversion, connection formulae, and Budden tunneling. Applications to RF plasma heating, wave propagation in the ionosphere and laser-plasma interactions. Wave propagation in toroidal plasmas, and applications to ion cyclotron (ICRF), electron cyclotron (ECRH), and lower hybrid (LHH) wave heating. Quasi-linear theory and applications to RF current drive in tokamaks. Extensive discussion of relevant experimental observations.

*M. Porkolab***8.641 Physics of High-Energy Plasmas I**

Prereq: 22.611[J]

G (Fall)

Not offered regularly; consult department

3-0-9 units

Physics of High-Energy Plasmas I and II address basic concepts of plasmas, with temperatures of thermonuclear interest, relevant to fusion research and astrophysics. Microscopic transport processes due to interparticle collisions and collective modes (e.g., microinstabilities). Relevant macroscopic transport coefficients (electrical resistivity, thermal conductivities, particle "diffusion"). Runaway and slide-away regimes. Magnetic reconnection processes and their relevance to experimental observations. Radiation emission from inhomogeneous plasmas. Conditions for thermonuclear burning and ignition (D-T and "advanced" fusion reactions, plasmas with polarized nuclei). Role of "impurity" nuclei. "Finite- β " (pressure) regimes and ballooning modes. Convective modes in configuration and velocity space. Trapped particle regimes. Nonlinear and explosive instabilities. Interaction of positive and negative energy modes. Each subject can be taken independently.

*Consult M. Porkolab***Nuclear and Particle Physics****8.701 Introduction to Nuclear and Particle Physics**

Prereq: None. Coreq: 8.321

G (Fall)

3-0-9 units

The phenomenology and experimental foundations of particle and nuclear physics; the fundamental forces and particles, composites. Interactions of particles with matter, and detectors. SU(2), SU(3), models of mesons and baryons. QED, weak interactions, parity violation, lepton-nucleon scattering, and structure functions. QCD, gluon field and color. W and Z fields, electro-weak unification, the CKM matrix. Nucleon-nucleon interactions, properties of nuclei, single- and collective- particle models. Electron and hadron interactions with nuclei. Relativistic heavy ion collisions, and transition to quark-gluon plasma.

*M. Williams***8.711 Nuclear Physics**

Prereq: 8.321 and 8.701

G (Spring)

4-0-8 units

Modern, advanced study in the experimental foundations and theoretical understanding of the structure of nuclei, beginning with the two- and three-nucleon problems. Basic nuclear properties, collective and single-particle motion, giant resonances, mean field models, interacting boson model. Nuclei far from stability, nuclear astrophysics, big-bang and stellar nucleosynthesis. Electron scattering: nucleon momentum distributions, scaling, polarization observables. Parity-violating electron scattering. Neutrino physics. Current results in relativistic heavy ion physics and hadronic physics. Frontiers and future facilities.

*O. Hen***8.712 Advanced Topics in Nuclear Physics**

Prereq: 8.711 or permission of instructor

G (Fall, Spring)

Not offered regularly; consult department

3-0-9 units

Can be repeated for credit.

Subject for experimentalists and theorists with rotation of the following topics: (1) Nuclear chromodynamics-- introduction to QCD, structure of nucleons, lattice QCD, phases of hadronic matter; and relativistic heavy ion collisions. (2) Medium-energy physics-- nuclear and nucleon structure and dynamics studied with medium- and high-energy probes (neutrinos, photons, electrons, nucleons, pions, and kaons). Studies of weak and strong interactions.

8.811 Particle Physics

Prereq: 8.701
 G (Fall)
 3-0-9 units

Modern review of particles, interactions, and recent experiments. Experimental and analytical methods. QED, electroweak theory, and the Standard Model as tested in recent key experiments at ee and pp colliders. Mass generation, W, Z, and Higgs physics. Weak decays of mesons, including heavy flavors with QCD corrections. Mixing phenomena for K, D, B mesons and neutrinos. CP violation with results from B-factories. Future physics expectations: Higgs, SUSY, sub-structure as addressed by new experiments at the LHC collider.
L. Winslow

8.812 Graduate Experimental Physics

Prereq: 8.701
 G (IAP)
 Not offered regularly; consult department
 1-8-3 units

Provides practical experience in particle detection with verification by (Feynman) calculations. Students perform three experiments; at least one requires actual construction following design. Topics include Compton effect, Fermi constant in muon decay, particle identification by time-of-flight, Cerenkov light, calorimeter response, tunnel effect in radioactive decays, angular distribution of cosmic rays, scattering, gamma-gamma nuclear correlations, and modern particle localization.
U. Becker

8.821 String Theory

Prereq: 8.324
 Acad Year 2021-2022: Not offered
 Acad Year 2022-2023: G (Fall)
 3-0-9 units
 Credit cannot also be received for 8.251

An introduction to string theory. Basics of conformal field theory; light-cone and covariant quantization of the relativistic bosonic string; quantization and spectrum of supersymmetric 10-dimensional string theories; T-duality and D-branes; toroidal compactification and orbifolds; 11-dimensional supergravity and M-theory. Meets with 8.251 when offered concurrently.

 3-0-9 units
 Can be repeated for credit.

Topics selected from the following: SUSY algebras and their particle representations; Weyl and Majorana spinors; Lagrangians of basic four-dimensional SUSY theories, both rigid SUSY and supergravity; supermultiplets of fields and superspace methods; renormalization properties, and the non-renormalization theorem; spontaneous breakdown of SUSY; and phenomenological SUSY theories. Some prior knowledge of Noether's theorem, derivation and use of Feynman rules, l-loop renormalization, and gauge theories is essential.
J. Thaler

8.851 Effective Field Theory

Prereq: 8.324
 Acad Year 2021-2022: G (Spring)
 Acad Year 2022-2023: Not offered
 3-0-9 units
 Credit cannot also be received for 8.S851

Covers the framework and tools of effective field theory, including: identifying degrees of freedom and symmetries; power counting expansions (dimensional and otherwise); field redefinitions, bottom-up and top-down effective theories; fine-tuned effective theories; matching and Wilson coefficients; reparameterization invariance; and advanced renormalization group techniques. Main examples are taken from particle and nuclear physics, including the Soft-Collinear Effective Theory.
I. Stewart

8.861 Advanced Topics in Superfluidity

Prereq: 8.324

G (Fall)

Not offered regularly; consult department

3-0-9 units

Basic pairing theory, effective field theory and spontaneous symmetry breaking; well-established applications to liquid helium 3 as a warm-up; research will be explored including anisotropic superconductivity in heavy fermion systems and cuprates; color superconductivity in high-density QCD; and pairing in fermion systems with mismatched Fermi surfaces, including ultracold atom systems. Additional ideas needed to discuss the fractional quantum Hall effect will be reviewed, emphasizing its connection to conventional superfluidity, and pointing toward aspects of anyon behavior potentially relevant for quantum information processing.

3-0-9 units

Observable stellar characteristics; overview of observational information. Principles underlying calculations of stellar structure. Physical processes in stellar interiors; properties of matter and radiation; radiative, conductive, and convective heat transport; nuclear energy generation; nucleosynthesis; and neutrino emission. Protostars; the main sequence, and the solar neutrino flux; advanced evolutionary stages; variable stars; planetary nebulae, supernovae, white dwarfs, and neutron stars; close binary systems; and abundance of chemical elements.

Staff

8.942 Cosmology

Prereq: Permission of instructor

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: G (Fall)

3-0-9 units

Thermal backgrounds in space. Cosmological principle and its consequences: Newtonian cosmology and types of "universes"; survey of relativistic cosmology; horizons. Overview of evolution in cosmology; radiation and element synthesis; physical models of the "early stages." Formation of large-scale structure to variability of physical laws. First and last states. Some knowledge of relativity expected. 8.962 recommended though not required.

K. Masui

8.952 Particle Physics of the Early Universe

Prereq: 8.323; Coreq: 8.324

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: G (Spring)

3-0-9 units

Basics of general relativity, standard big bang cosmology, thermodynamics of the early universe, cosmic background radiation, primordial nucleosynthesis, basics of the standard model of particle physics, electroweak and QCD phase transition, basics of group theory, grand unified theories, baryon asymmetry, monopoles, cosmic strings, domain walls, axions, inflationary universe, and structure formation.

A. Guth

8.962 General Relativity

Prereq: 8.07, 18.03, and 18.06

G (Spring)

4-0-8 units

The basic principles of Einstein's general theory of relativity, differential geometry, experimental tests of general relativity, black holes, and cosmology.

*A. Guth***8.971 Astrophysics Seminar**

Prereq: Permission of instructor

G (Fall, Spring)

Not offered regularly; consult department

2-0-4 units

Can be repeated for credit.

Advanced seminar on current topics, with a different focus each term. Typical topics: astronomical instrumentation, numerical and statistical methods in astrophysics, gravitational lenses, neutron stars and pulsars.

*Consult D. Chakrabarty***8.972 Astrophysics Seminar**

Prereq: Permission of instructor

G (Fall, Spring)

Not offered regularly; consult department

2-0-4 units

Can be repeated for credit.

Advanced seminar on current topics, with a different focus each term. Typical topics: gravitational lenses, active galactic nuclei, neutron stars and pulsars, galaxy formation, supernovae and supernova remnants, brown dwarfs, and extrasolar planetary systems. The presenter at each session is selected by drawing names from a hat containing those of all attendees. Offered if sufficient interest is indicated.

*Consult D. Chakrabarty***8.981, 8.982 Selected Topics in Astrophysics**

Prereq: Permission of instructor

G (Spring)

Not offered regularly; consult department

3-0-9 units

Can be repeated for credit.

Topics of current interest, varying from year to year. Subject not routinely offered; given when sufficient interest is indicated.

*Consult D. Chakrabarty***8.995 Practical Experience in Physics**

Prereq: None

G (Fall, IAP, Spring, Summer)

Units arranged [P/D/F]

Can be repeated for credit.

For Course 8 students participating in off-campus experiences in physics. Before registering for this subject, students must have an internship offer from a company or organization, must identify a Physics supervisor, and must receive prior approval from the Physics Department. Upon completion of the project, student must submit a letter from the company or organization describing the work accomplished, along with a substantive final report from the student approved by the MIT supervisor. Consult departmental academic office.

*Consult N. Mavalvala***8.S301 Special Subject: Physics**

Prereq: Permission of instructor

G (Spring)

Not offered regularly; consult department

Units arranged

Covers topics in Physics that are not offered in the regular curriculum. Limited enrollment; preference to Physics graduate students.

*A. Lightman***8.S372 Special Subject: Physics**

Prereq: None

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: G (Fall)

3-0-9 units

Covers topics in Physics that are not offered in the regular curriculum.

*A. Harrow***8.S396 Special Subject: Physics**

Prereq: None

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: G (Spring; first half of term)

Units arranged [P/D/F]

Covers topics in Physics that are not offered in the regular curriculum.

A. Frebel

8.S397 Special Subject: Physics

Prereq: None

Acad Year 2021-2022: Not offered

Acad Year 2022-2023: G (Spring; second half of term)

Units arranged [P/D/F]

Covers topics in Physics that are not offered in the regular curriculum.

A. Frebel

8.S421 Special Subject: Physics

Prereq: Permission of instructor

G (Fall)

Not offered regularly; consult department

Units arranged

Can be repeated for credit.

Opportunity for group study of subjects in physics not otherwise included in the curriculum.

W. Ketterle

8.THG Graduate Physics Thesis

Prereq: Permission of instructor

G (Fall, IAP, Spring, Summer)

Units arranged

Can be repeated for credit.

Program of research leading to the writing of an SM, PhD, or ScD thesis; to be arranged by the student and an appropriate MIT faculty member.

Consult J. Stewart
