EDGERTON CENTER (EC)

The Edgerton Center specializes in experiential learning and offers interactive subjects in electronics, high-speed photography, and video production. The center is also the home of D-Lab classes (see EC.700-EC.792J).

Seminars

EC.050 Re-create Experiments from History: Inform the Future from the Past
Subject meets with EC.090
Prereq: None
U (Fall, IAP, Spring)
1-3-2 units

Provides perspective for thinking about the future through the study of historical physical science and historically significant experiments. Designed to build awareness of the unexpected through both observation of the sky and lab activities that focus on light, electricity, and motion. Labs are complemented by museum and site visits; readings include accounts by Galileo, Archimedes, and other historical observers. Individual and team assignments provide opportunities to develop skills in observation, exploration, and evaluation. Students must keep an observing notebook and write a reflective paper; students taking the graduate version complete additional assignments.

J. Bales, E. Cavicchi

EC.074 The Start-up Experience at MIT
Prereq: None
U (Fall)
2-0-4 units

Explores some of the critical actions in starting up a technology-based business, including concept generation, searching prior art and patents, protecting intellectual property, founders agreements, forming and building teams, and work-life balance. Students review case studies and complete exercises that develop practicable knowledge in these areas. Each student keeps an “idea log book,” which includes critical assessments of each case study, to be presented at the end of the term. First in a two-part series (seminars do not have to be taken sequentially; see EC.075 in spring term).

Preference to undergraduates; open to graduate students with permission of advisor.

J. Hadzima

EC.075 Starting Up New Technology-Based Business Enterprises at MIT
Prereq: None
U (Spring)
2-0-4 units

Seminar participants define and study the development stages of new enterprises at MIT, from the exciting moment a new idea for a tech product or service is realized, through to selling, customer support, and the next new idea. Follows the history of successful MIT spin-off companies with attention to the people (and their ideas) behind the start-up. Students attend MIT technology and science start-up case presentations given by individuals and teams working from zero-stage, and by partners in going concerns of historical relevance to the Institute and the economy. Second in a two-part series (seminars do not have to be taken sequentially; see EC.074 in fall term).

J. G. Hadzima

EC.090 Re-create Experiments from History: Inform the Future from the Past
Subject meets with EC.050
Prereq: None
G (Fall, IAP, Spring)
1-3-2 units

Provides perspective for thinking about the future through the study of historical physical science and historically significant experiments. Designed to build awareness of the unexpected through both observation of the sky and lab activities that focus on light, electricity, and motion. Labs are complemented by museum and site visits; readings include accounts by Galileo, Archimedes, and other historical observers. Individual and team assignments provide opportunities to develop skills in observation, exploration, and evaluation. Students must keep an observing notebook and write a reflective paper; students taking the graduate version complete additional assignments.

J. Bales, E. Cavicchi
Electronics and Programming

**EC.100 Electronics Fabrication and Design I**  
Prereq: None  
U (Fall, Spring; first half of term)  
Not offered regularly; consult department  
0-3-0 units  
Explores the science and art of building electronic devices. Using soldering techniques, each student builds the circuit board for a power supply from a kit, and installs the circuit into a case. In the process, students decide what connectors are required, where to place them, and how to incorporate a meter to measure the output voltage. No previous electronics experience necessary. Limited to 10.  
A. Caloggero

**EC.101 Electronics Fabrication and Design II**  
Prereq: None  
U (Fall, Spring; second half of term)  
Not offered regularly; consult department  
0-3-0 units  
Covers printed circuit board (PCB) technologies that enabled the electronics revolution. Explores techniques for making circuit boards using computer-based design tools. Each student designs and fabricates a PCB, and has the opportunity to build it into useful circuits. No previous electronics experience necessary. Limited to 10.  
A. Caloggero

**EC.110[J] Introduction to Digital Electronics**  
Same subject as 6.072[J]  
Prereq: None  
U (Fall, Spring)  
0-3-3 units  
Design your own circuits for times when off-the-shelf solutions are not available. Seminar begins with assembly of a utility board. Weekly labs cover digital logic gates, memory elements, and finite-state machine design. Seminar concludes with a team-based design project. Preference given to freshmen. Maximum of 10 students per term, lottery at the first class session if oversubscribed.  
J. Bales

**EC.120[J] Electronics Project Laboratory**  
Same subject as 6.070[J]  
Prereq: None  
U (Fall, Spring)  
2-2-2 units  
See description under subject 6.070[J]. Enrollment may be limited.  
J. Bales

Imaging and Visualization

**EC.210 Visualization for Mathematics, Science, and Technology Education**  
Prereq: None  
U (Spring)  
Not offered regularly; consult department  
3-2-7 units  
Introduces principles and techniques for visual communication of educational concepts in mathematics, the natural sciences, and engineering. Students complete interactive assignments and class activities in visual arts media, such as photography, illustration, stop-motion and computer animation, and web graphics. A final project in a visual arts medium of the student’s choice must meet professional aesthetic standards for visualization; it must also be applicable for teaching and learning concepts in mathematics, science, or engineering in a formal or informal setting. Coursework requires use of production equipment (e.g., photo and video cameras) and software tools (Adobe Creative Suite, Final Cut Studio, and Maya) at the New Media Center. Limited to 18.  
V. Ivanova

Media and Production

**EC.305 Digital and Darkroom Imaging**  
Subject meets with EC.A305  
Prereq: None  
U (Fall)  
2-0-4 units  
Credit cannot also be received for EC.310  
Students use both film and digital photography to develop a creative imaging project of their own choice. Develops skills in the use of image editing software to enhance, select, and combine images that the student has taken. Uses the darkroom to develop film for scanning and for chemical enlargement. Discusses topics such as the camera, composition, lighting, modes and formats, image compression, and halftone and dye sublimation printing. Students are expected to produce a duplicate set of black and white and/or color prints, along with a writeup and digital copy as the project output.  
T. Mislick
**EC.310 Creative Imaging**
Prereq: None
U (Spring)
2-1-6 units. HASS-E
Credit cannot also be received for EC.305, EC.A305

Focuses on film and digital photography. Develops skill in the use of chemical darkrooms, scanners, digital printers and cameras to create striking still images capable of evoking strong emotional and intellectual responses from a viewer. Emphasizes the interplay between classical chemical and digital techniques and how they can be used to control the use of lighting, color, depth, and composition in an image. Students present their intermediate assignments to the class for critical discussion; at the end of the term, they submit a substantive project presenting their own creative images for critique and evaluation.

*T. Mislick, J. K. Vandiver*

**D-Lab**

**EC.700 D-Lab: Field Study**
Prereq: One D-Lab subject, permission of instructor
U (IAP)
Units arranged
Can be repeated for credit.

Provides the opportunity to gain direct fieldwork experience in a global context. Subject spans three-four weeks in which students continue work from a prior D-Lab subject. Students work directly with international community partners to find solutions to real world problems, focusing on one or more issues in education, design, or public service. Group presentations and written reflection required.

*A. B. Smith*

**EC.701[J] D-Lab: Development**
Same subject as 11.025[J]
Subject meets with 11.472[J], EC.781[J]
Prereq: None
U (Fall)
3-2-7 units. HASS-S

Issues in international development, appropriate technology and project implementation addressed through lectures, case studies, guest speakers and laboratory exercises. Students form project teams to partner with community organizations in developing countries, and formulate plans for an optional IAP site visit. (Previous field sites include Ghana, Brazil, Honduras and India.) Recitation sections focus on specific project implementation, and include cultural, social, political, environmental and economic overviews of the target countries as well as an introduction to the local languages. Enrollment limited by lottery; must attend first class session.

*S. L. Hsu, A. B. Smith, B. Sanyal*

**EC.702[J] Cross-Cultural Investigations: Technology and Development**
Same subject as 21A.801[J], STS.071[J]
Subject meets with EC.792[J], 21A.839[J], STS.481[J]
Prereq: None
Acad Year 2016-2017: Not offered
Acad Year 2017-2018: U (Spring)
3-0-9 units. HASS-S

See description under subject 21A.801[J].

*C. Walley*

**EC.711[J] D-Lab: Energy**
Same subject as 2.651[J]
Subject meets with EC.791
Prereq: None
U (Spring)
3-3-6 units

Provides a project-based approach that engages students in understanding and addressing the applications of alternative energy technology in developing countries. Focuses on compact, robust, low-cost systems for generating electrical power. Includes projects such as micro-hydro, solar, or wind turbine generators along with theoretical analysis, design, prototype construction, evaluation and implementation. Students will have the opportunity for an optional spring break site visit to identify and implement projects. Students taking graduate version complete additional assignments. Enrollment limited by lottery; must attend first class session.

*S. L. Hsu*

**EC.712 D-Lab: Information and Communication Technologies for Development (ICT)**
Same subject as 11.025[J]
Subject meets with EC.782
Prereq: None
U (Fall)
Not offered regularly; consult department
2-2-8 units

Explores the use of information and communication technologies (ICT) to address specific needs in developing countries. Establishes knowledge and engineering skills needed to successfully deploy an ICT project, with a focus on appropriateness, transferability, and long-term sustainability. The first half of term presents an introduction to communication hardware, including antenna design, RFID, Bluetooth, Wi-Fi, and low-power sensors. Second half covers development of mobile phone applications and server communications, as well as system architecture for data collection and mapping. Students work in multidisciplinary teams, collaborating with local community partners. Culminates in a final project to be deployed in the field. Students taking graduate version complete additional assignment related to the term project.

*R. Fletcher, A. Smith*
EC.713[J] D-Lab Schools: Building Technology Laboratory

Same subject as 4.411[J]
Prereq: Physics I (GIR), Calculus I (GIR)
Acad Year 2016-2017: Not offered
Acad Year 2017-2018: U (Fall)
2-3-7 units. Institute LAB

See description under subject 4.411[J].
L. K. Norford

EC.714 D-Lab: Earth

Prereq: None
U (Spring)
2-0-4 units

Multidisciplinary seminar explores the interacting systems of global biodiversity and human well-being to address how low-income communities can both preserve and use their natural resources sustainably. Includes guest lectures, experiential activities, and projects. Covers topics such as reforestation, nutrient cycles, poaching, climate change, eco-tourism, governance, ecological measurement and sustainable design. Potential opportunities for travel.
S. Murcott, A. Phillips

EC.715 D-Lab: Water, Sanitation, Hygiene and Environmental Innovations for the Common Good

Subject meets with 11.474
Prereq: None
Acad Year 2016-2017: Not offered
Acad Year 2017-2018: U (Spring)
3-0-6 units

Focuses on disseminating Water, Sanitation and Hygiene (WASH) or water/environment innovations in developing countries and underserved communities worldwide. Structured around field-based learning, case studies, lectures and videos in which teams propose an idea and are mentored through the process of bringing that innovation to fruition. Emphasizes core WASH and water/environment principles, culture-specific solutions, tools for start-ups, appropriate and sustainable technologies, behavior change, social marketing, building partnerships, and the theory and practice of innovation diffusion. Term project entails entering the IDEAS or other competition(s) while implementing a WASH or water/environment innovation in a specific locale. Guest lectures on specific real-world WASH and water/environment projects which have been disseminated by MIT faculty, students, alumni, and others. Students taking graduate version complete additional assignments. Limited to 30.
S. E. Murcott

EC.716 D-Lab: Waste

Subject meets with EC.786
Prereq: None
Acad Year 2016-2017: Not offered
Acad Year 2017-2018: U (Fall)
3-2-4 units

Uses a multi-disciplinary approach to understand global challenges related to waste. Discusses cradle-to-cradle design, upcycling, diminishment of environmental impacts, and enterprise opportunities for marginalized populations. Studies zero-waste strategies worldwide; examines different models of collection, recycling, waste management, and businesses developed in low-income settings; and researches public policy that supports sustainable, integrated waste management systems. Teams develop solutions around waste-related challenges, in partnership with wastepickers, municipal governments, and private sector and community organizations. Includes guest speakers and field trips, as well as opportunities for IAP or summer travel. Students taking graduate version complete additional assignments.
K. Mytty

EC.717 D-Lab: Education and Learning

Subject meets with EC.787
Prereq: None
U (Spring)
2-3-7 units

Explores education in learning environments around the world that are hindered by challenges such as limited resources, language barriers, large class sizes, and entrenched pedagogy. Through an overview of core teaching skills that emphasize experiential and project-based learning, class provides the necessary background to nurture creativity in youth and develop methods of fostering design thinking, leadership, community, livelihood applications, and more. Students develop educational strategies to teach practical skills to local and international community partners and receive feedback from peers and mentors. International fieldwork opportunities may be available. Limited to 20.
S. Hsu
EC.719 D-Lab: Water and Climate Change (New)
Subject meets with EC.789
Prereq: None
U (Spring)
3-4-5 units
Addresses mitigation and adaptation to climate change as it relates to water. Weekly seminars as well as readings and discussions, workshops/games, field trips, and films tackle the water/climate change challenge and explore solutions. Field trips include coastal watershed restoration, flood protection, carbon sequestration and zero carbon sites in the greater Boston area. Students submit a project proposal (individually or in teams) to MIT Climate CoLab or a grant-making organization of their choice.
S. Murcott

EC.720[J] D-Lab: Design
Same subject as 2.722[J]
Prereq: 2.670 or permission of the instructor
U (Spring)
3-0-9 units
Addresses problems faced by underserved communities with a focus on design, experimentation, and prototyping processes. Particular attention placed on constraints faced when designing for developing countries. Multidisciplinary teams work on long-term projects in collaboration with community partners, field practitioners, and experts in relevant fields. Topics covered include design for affordability, manufacture, sustainability, and strategies for working effectively with community partners and customers. Students may continue projects begun in EC.701[J]. Enrollment limited by lottery; must attend first class session.
A. B. Smith, M. McCambridge

EC.721 D-Lab: Mobility Technology for, by, and with People with Disabilities
Prereq: None
U (Fall)
2-2-5 units
Students improve wheelchair technology in developing countries by applying sound engineering practices to create appropriate devices. Lectures focus on wheelchair usage, social stigmas, and manufacturing constraints. Includes lectures by third-world community partners, US wheelchair organizations, and MIT faculty. Multidisciplinary student teams conduct term-long wheelchair projects relating to hardware design. Funded opportunities available for travel to implement class projects at wheelchair workshops in the field.
M. McCambridge

EC.722 Prosthetics for the Developing World
Prereq: None
U (Spring)
2-2-5 units
Introduces the fundamentals of human walking. Provides an overview of different types of gait disabilities and the available technologies that address them. Presents patient perspective as well as current areas of research. Topics focus on lower-limb disabilities, such as polio and above- and below-knee amputation. Covers both developed and developing world techniques for overcoming these disabilities. Includes a term project in which teams of 3 to 5 students manufacture a prototype. Teams meet outside of class and work with a TA (project mentor) to research, design, prototype, and test a solution. Projects focus on low-cost orthotic and prosthetic knee designs for the developing world, as specified by partner organizations in India and Guatemala.
M. McCambridge

EC.729[J] D-Lab: Design for Scale
Same subject as 2.729[J]
Prereq: Permission of instructor
U (Fall)
3-2-7 units
Focuses on product development of technologies for people in less industrialized markets. Students work in interdisciplinary teams to develop previously established prototypes or technologies towards manufacturing-ready product designs. Topics are presented within the context of the developing world and include technology feasibility and scalability assessment; value chain analysis; product specification; design for affordability, manufacturability, usability, and desirability; and product testing and manufacturing at various scales. Lessons are experiential and case study-based; taught by instructors with field experience and by industry experts from product development consulting firms and the consumer electronics industry.
M. McCambridge, M. Yang, H. Quintus-Bosz

EC.731[J] Development Ventures
Same subject as 15.375[J], MAS.665[J]
Prereq: Permission of instructor
G (Fall)
3-0-9 units
See description under subject MAS.665[J].
J. Bonsen, A. Pentland, C. Breazeal
EC.733[J] D-Lab: Supply Chains
Same subject as 15.772[J]
Prereq: None
U (Fall)
3-3-6 units
See description under subject 15.772[J].
S. C. Graves

EC.740 D-Lab: New Economies (New)
Prereq: None
U (Spring)
3-0-6 units
Explores the ideas behind and actions toward alternatives to the corporate-driven globalization economic model. Begins with review and analysis of the worldviews that led to the current system and the theoretical and empirical arguments embraced by its critics. Examines concepts and case studies for developing new opportunities, including circular and local economies. Concludes with an experiential component in which students apply the concepts to develop a strategy (economic, policy, or other) for building on and contributing to a sustainable and inclusive local economy in a mid-sized city in Nicaragua. Potential opportunities for travel over summer. Limited to 12.
E. McDonald, K. Mytty

EC.750 Humanitarian Innovation: Design for Relief, Rebuilding, and Recovery (New)
Subject meets with EC.785
Prereq: None
U (Spring)
4-0-8 units
Explores the role innovation can and does play in how humanitarian aid is provided, and how it can impact people, products, and processes. Provides a fundamental background in the history and practice of humanitarian aid. Considers the various ways that design can be used to enhance aid, such as product and system design for affected populations, co-creation with affected populations, and capacity building to promote design by refugees and the displaced. Case studies and projects examine protracted displacement as well as recovery and resettlement, including efforts in Colombia, Lebanon, Nepal, Sudan, and Uganda. Potential for students to travel over the summer to partner communities.
A. Smith, M. Thompson

EC.770 D-Lab: Independent Project
Prereq: Permission of instructor
U (IAP, Spring)
Units arranged [P/D/F]
Can be repeated for credit.
Opportunity for independent study under regular supervision by a staff member. Projects require prior approval, as well as a written proposal and final report. Students work with international community partners to continue developing projects, focusing on one or more issues in education, design, or public service. Final presentations and written reflection required. May be repeated for credit for a maximum of 12 units.
V. Grau-Serrat

EC.780 D-Lab: Independent Project
Prereq: None
G (IAP, Spring)
Units arranged
Can be repeated for credit.
Opportunity for independent study under regular supervision by a staff member. Projects require prior approval, as well as a written proposal and final report. Students work with international community partners to continue developing projects, focusing on one or more issues in education, design, or public service. Final presentations and written reflection required. May be repeated for credit for a maximum of 12 units.
V. Grau-Serrat

EC.781[J] D-Lab: Development
Same subject as 11.472[J]
Subject meets with 11.025[J], EC.701[J]
Prereq: None
G (Fall)
3-2-7 units
Issues in international development, appropriate technology and project implementation addressed through lectures, case studies, guest speakers and laboratory exercises. Students form project teams to partner with community organizations in developing countries, and formulate plans for an optional IAP site visit. (Previous field sites include Ghana, Brazil, Honduras and India.) Recitation sections focus on specific project implementation, and include cultural, social, political, environmental and economic overviews of the target countries as well as an introduction to the local languages. Enrollment limited by lottery; must attend first class session.
S. L. Hsu, A. B. Smith, B. Sanyal
**EC.782 D-Lab: Information and Communication Technologies for Development (ICT)**
Subject meets with EC.712
Prereq: None
G (Fall)
Not offered regularly; consult department
2-2-8 units

Explores the use of information and communication technologies (ICT) to address specific needs in developing countries. Establishes knowledge and engineering skills needed to successfully deploy an ICT project, with a focus on appropriateness, transferability, and long-term sustainability. The first half of term presents an introduction to communication hardware, including antenna design, RFID, Bluetooth, Wi-Fi, and low-power sensors. Second half covers development of mobile phone applications and server communications, as well as system architecture for data collection and mapping. Students work in multidisciplinary teams, collaborating with local community partners. Culminates in a final project to be deployed in the field. Students taking graduate version complete additional assignment related to the term project.

*K. Mytty*

---

**EC.788 D-Lab: Field Research**
Prereq: Permission of instructor
G (Spring)
3-0-9 units

Combines hands-on methods for conducting field research with exploration of questions that continue to challenge practitioners, donors, policymakers and researchers in international development. Designed for students preparing to conduct field-based research for theses, product design project, or development ventures. Practices key research skills particularly applicable to conducting research involving people and communities in the context of development. Limited to 16.

*E. Moreno*

---

**EC.789 D-Lab: Water and Climate Change (New)**
Subject meets with EC.719
Prereq: None
G (Spring)
3-4-5 units

Addresses mitigation and adaptation to climate change as it relates to water. Weekly seminars as well as readings and discussions, workshops/games, field trips, and films tackle the water/climate change challenge and explore solutions. Field trips include coastal watershed restoration, flood protection, carbon sequestration and zero carbon sites in the greater Boston area. Students submit a project proposal (individually or in teams) to MIT Climate CoLab or a grant-making organization of their choice.

*S. Murcott*
EC.790 D-Lab: Field Study
Prereq: One D-Lab subject, permission of instructor
G (IAP)
Units arranged
Can be repeated for credit.

Provides the opportunity to gain direct fieldwork experience in a global context. Subject spans three-four weeks in which students continue work from a prior D-Lab subject. Students work directly with international community partners to find solutions to real world problems, focusing on one or more issues in education, design, or public service. Group presentations and written reflection required.
S. Hsu

EC.791 D-Lab: Energy
Subject meets with 2.651[J], EC.711[J]
Prereq: None

Special Subjects

EC.S00-EC.S05 Special Subject at the Edgerton Center
Prereq: None
U (Fall, IAP, Spring)
Not offered regularly; consult department
Units arranged [P/D/F]
Can be repeated for credit.

EC.S06-EC.S10 Special Subject at the Edgerton Center
Prereq: None
U (Fall, IAP, Spring)
Not offered regularly; consult department
Units arranged
Can be repeated for credit.

EC.S11 Special Subject at the Edgerton Center
Prereq: None
G (Fall)
Units arranged
Can be repeated for credit.

Seminar combining lectures and lab run by students and academic staff at the Edgerton Center. Students explore specialized electronics, robotics, or mechanical design and fabrication topics not offered in the regular curriculum; classes range from beginner level to more advanced. Some offerings may be taught in an intensive fashion (meeting for up to several times a week for four weeks). Up to three sequential seminars may be offered per semester, covering a different topic each time. Students can take one or all of the seminars.

Staff

EC.S12 Special Subject at the Edgerton Center
